CERTIFICATION STATEMENT

This 2023 Semi-Annual Groundwater Monitoring and Corrective Action Report, Georgia Power Company - Plant Bowen Solid Waste Disposal Facility Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10 has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule [Title 40 Code of Federal Regulations (40 CFR) 257 Subpart D, specifically § 257.90(e)] and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Stantec Consulting Services Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

2023 Semi-Annual Groundwater Monitoring and Corrective Action Report Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10

Executive Summary

This summary of the 2023 *Semi-Annual Groundwater Monitoring and Corrective Action Report* provides the status of the groundwater monitoring and corrective action program from January through June 2023 at the Georgia Power Company (Georgia Power) Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10 (the Landfill or the Site). This summary was prepared by Stantec Consulting Services Inc. (Stantec) on behalf of Georgia Power to meet the requirements listed in Part A, Section 6¹ of the United States Environmental Protection Agency (US EPA) coal combustion residuals rule (CCR Rule) (Title 40 Code of Federal Regulations [40 CFR] 257 Subpart D).

The Landfill is located in Bartow County off State Highway 113, approximately seven miles west-southwest of Cartersville, Georgia and 20 miles southeast of Rome, Georgia. The Landfill receives coal combustion by-products, coal ash, and gypsum from coal power generating processes at Plant Bowen. The Landfill cells are lined in accordance with Solid Waste Permit No. 008-018D (CCR). Gypsum placement in disposal Cells 1 & 2 began in November 2008, whereas ash placement in disposal Cells 3 & 4 began in February 2015. Waste placement operations were initiated in Cells 9 & 10 in November 2015. Landfill Cells 5 & 6 and 7 & 8 are being cleared in preparation for Landfill expansion. The Site is located on the northeastern portion of the Plant Bowen property.

Plant Bowen Landfill Cells

Groundwater monitoring for the Landfill was previously conducted under the requirements of the Georgia Solid Waste Permit No. 008-018D (LI) and in accordance with the specifications in the permit-issued Design and Operation (D&O) Plan. Georgia Environmental Protection Division (GA EPD) issued CCR Permit No. 008-018D (CCR) on December 8, 2022, which replaces Georgia Solid Waste Permit No. 008-018D (LI). Routine groundwater monitoring and reporting is conducted at the Site pursuant to the groundwater monitoring plan in the new permit. Groundwater at the Site is monitored using a groundwater monitoring system of wells installed to meet federal and state monitoring requirements.

Groundwater monitoring, in accordance with the previous permit-issued D&O Plan, began in 2007 prior to disposal activities and continues to date under the 2022 CCR Permit Groundwater Monitoring Plan. Routine sampling and reporting for CCR Rule Appendix III constituents began after the background groundwater conditions were established between February 2016 and August 2017 for Cells 1, 2, 3, 4, 9, and 10. Additional wells were installed in support of the expansion of Cells 5-8 in April-May of 2023, and background groundwater sampling began in June 2023 in accordance with § 257.94. Results of the

¹ 80 FR 21468, Apr. 17, 2015, as amended at 81 FR 51807, Aug. 5, 2016; 83 FR 36452, July 30, 2018; 85 FR 53561, Aug. 28, 2020

**2023 Semi-Annual Groundwater Monitoring and Corrective Action Report
Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10**

background sampling for Cells 5-8 will be documented in future Groundwater Monitoring and Corrective Action reports.

During the 2023 semi-annual reporting period, one groundwater sampling event was conducted in February 2023 for Cells 1 & 2, 3 & 4, and 9 & 10. Groundwater samples were submitted to Pace[®] Analytical Services, Inc. (Pace), for analysis of Appendix III parameters². Per the CCR Rule, the groundwater analytical results were evaluated in accordance with certified statistical methods. Verified Appendix III constituents with statistically significant increases (SSIs) are provided in the table below and are addressed by the April 19, 2018 and August 18, 2020 Alternate Source Demonstrations (ASDs). An ASD was submitted to GA EPD on May 1, 2023, to address the sulfate and total dissolved solids (TDS) SSIs in GWC-23R identified in the August 2022 semi-annual sampling event.

Appendix III Constituents (SSIs)	February 2023
Calcium	GWC-16R, GWC-17R, GWC-21R, GWC-23R
pH (lower limit)	GWC-9, GWC-44, GWC-45, GWC-48
TDS	GWC-23R

Based on review of the Appendix III statistical results completed for the groundwater monitoring and corrective action program in 2023, the Landfill will continue detection monitoring.

² Boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids (TDS)

WSP WSP USA Environment & Infrastructure, Inc.

USGS United States Geological Survey

1 Introduction

This 2023 Semi-Annual Groundwater Monitoring and Corrective Action Report has been prepared by Stantec Consulting Services Inc. (Stantec) on behalf of Georgia Power Company (Georgia Power) to document groundwater monitoring activities conducted from January 2023 through June 2023 at Georgia Power's Plant Bowen solid waste disposal facility Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10 (Landfill or Site). The groundwater monitoring activities were conducted in accordance with the United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule Title 40 Code of Federal Regulations (40 CFR) 257 Subpart D (CCR Rule) and the Georgia Environmental Protection Division (GA EPD) Rules of Solid Waste Management 391-3-4-.10.

Groundwater monitoring was previously conducted under the requirements of the Georgia Solid Waste Permit No. 008-018D (LI) and in accordance with the specifications in the permit-issued Design and Operation (D&O) Plan. GA EPD issued CCR Permit No. 008-018D (CCR) on December 8, 2022, which replaces Georgia Solid Waste Permit No. 008-018D (LI). Routine groundwater monitoring and reporting is conducted at the Site pursuant to the groundwater monitoring plan in the new permit.

This report provides the results from one semi-annual sampling event conducted in February 2023 and the resampling events in March and April 2023 at Cells 1 & 2, Cells 3 & 4, and Cells 9 & 10. This sampling event included the scheduled semi-annual sampling for the permit-required Appendix I constituents and the US EPA's CCR Appendix III constituents. The March and April 2023 resampling events were conducted to verify the potential statistically significant increases (SSIs) identified in the February 2023 semi-annual event. Additional wells were installed in support of the expansion of Cells 5-8 in April-May of 2023, and background groundwater sampling began in June 2023 in accordance with § 257.94. Results of the background sampling for Cells 5-8 will be documented in future Groundwater Monitoring and Corrective Action reports. This report satisfies the reporting requirements of applicable GA EPD Solid Waste Management Rules (391-3-4-.14) and federal and Georgia CCR Rule 40 CFR 257.90 (e) and 391-3-4-.10. In this report, for ease of reference when discussing the CCR Rules, the US EPA CCR Rule is cited.

1.1 Site Description and Background

The Plant Bowen Landfill is a Georgia Power-owned property located in Bartow County off State Highway 113, approximately seven miles west-southwest of Cartersville, Georgia, and 20 miles southeast of Rome, Georgia (Figure 1). The disposal facility is approximately 300 acres located on a previously undeveloped, contiguous portion of the plant property. The Landfill is located on the northeast portion of the Plant Bowen property. The disposal facility receives coal combustion by-products, coal ash, and gypsum from coal power generating processes at Plant Bowen. The landfill cells are lined in accordance with Solid Waste Permit No. 008-018D (CCR). Cells 3 & 4 and 9 & 10 have a leachate collection system. Gypsum placement in disposal Cells 1 & 2 began in November 2008, whereas ash placement in disposal Cells 3 & 4 began in February 2015. Waste placement operations were initiated in Cells 9 & 10 in November 2015. In 2020 GA EPD approved the placement of waste following a retrofit of Cells 9 & 10 with a leachate collection system. Cells 9 & 10 are used to store bottom ash. Development of Cells 5, 6, 7, and 8 has begun with land clearing, cell construction, and installation of monitoring wells. Monitoring well

**2023 Semi-Annual Groundwater Monitoring and Corrective Action Report
Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10
1 Introduction**

installation for the proposed landfill cells was completed in May 2023 and will be followed by eight background groundwater sampling events prior to placement of waste, per the site permit.

A groundwater monitoring system around each of the active disposal cells monitors the groundwater conditions at the Site. The monitoring well locations are shown on Figure 2. A subset of the monitoring wells is equipped with data loggers and telemetry systems for water level measurements and data transmission for real-time monitoring of groundwater levels in the subsurface karst geology.

Groundwater monitoring began in 2007 in accordance with the D&O Plan, prior to disposal activities, and continues to date. Groundwater monitoring and reporting activities, conducted in accordance with 40 CFR § 257.90 through § 257.94 of the CCR Rule, were initiated in 2016. Pursuant to 40 CFR § 257.94(b), the eight baseline sampling events were conducted from February 2016 to August 2017, with the initial detection monitoring event occurring in September-October 2017.

1.2 Regional Geology and Hydrogeologic Setting

The regional geology and hydrogeology of the Plant Bowen Landfill area are summarized below. The Site lies within the Valley and Ridge physiographic province about three to four miles north of the Cartersville Fault. The Cartersville Fault separates the late Precambrian-aged metamorphic rocks to the east and south from the Cambrian-aged sedimentary rocks to the north-northwest and west.

As described in the Hydrogeologic Report and Groundwater Monitoring Plan (Southern Company Services [SCS] 2006), the lithologies present in the landfill area of Plant Bowen from the ground surface to depth are terrace deposits, a residuum clay overburden, dolomite, and limestone bedrock. The Knox Group (dolomite and limestone bedrock) produces a characteristic orange to red clayey residuum (overburden soil) that ranges in thickness from 19 to 127 feet across the Site and often contains weathered chert and dolomite fragments. Silt and clay with some gravel and sand (terrace deposits) overlay the clayey residuum in some areas but are not continuous across the landfill area of Plant Bowen.

The uppermost aquifer for groundwater monitoring purposes is comprised of an overburden (residuum clay and partially weathered rock) and carbonate bedrock. The uppermost aquifer is unconfined, and, depending on the variability of weathering characteristics, the groundwater surface may occur in the overburden and/or carbonate bedrock. Overburden materials are heterogeneous ranging in composition from well-graded gravelly sand to fat clay. Bedrock underlying the Site (officially mapped as Knox undifferentiated) is a carbonate bedrock (limestone and dolomite). This local karst geology features massive limestone and dolostone beds with chert, calcite, and fractures and void spaces that were observed during well installation activities. Karst features within the underlying carbonate bedrock are predominately formed along initial discontinuities including joints, fissures (slots), fractures, and bedding planes or other linear features. These karst features may be partially or completely filled with soft unconsolidated sediments or may be empty or filled with water. The top of the karst features is usually identified as having a thin zone of weathered carbonate bedrock.

The groundwater flow in the Landfill Cells 1 & 2 and 9 & 10 area is generally to the north-northeast and west-northwest in the Landfill Cells 3 & 4 area. However, there are variations in groundwater flow direction at the Site. Information on groundwater flow for cells 5 & 6 and 7 & 8 will be included following the August 2023 semi-annual sampling event.

1.3 Groundwater Monitoring System

The existing groundwater monitoring system meets the requirements listed in § 257.91 and 391-3-4.10; a groundwater monitoring system was installed at the Landfill that consists of a sufficient number of wells installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer to represent the groundwater quality both upgradient of the unit (i.e., background conditions) and passing the waste boundary of the unit. The number, spacing, and depths of the groundwater monitoring wells were selected based on the characterization of site-specific hydrogeologic conditions. The locations of the monitoring wells included in the groundwater monitoring system are presented on Figure 2. Well construction details are listed in Table 1.

2 Groundwater Monitoring Activities

The following sections describe monitoring-related activities performed from January 2023 through June 2023. Samples were collected in February 2023 from each of the wells in the groundwater monitoring system shown on Figure 2. Verification sampling events were conducted in March and April 2023. Table 2 presents a summary of the 2023 groundwater sampling events completed for the Landfill during this monitoring period. Background groundwater sampling events for the wells installed in April 2023 began in June 2023.

2.1 Monitoring Well Installation and Maintenance

Monitoring wells are inspected semi-annually to determine if repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). In February 2023, monitoring wells were inspected, and necessary corrective actions were identified and subsequently completed, as documented in Appendix A.

The following modifications were made to the groundwater monitoring system during the Semi-Annual reporting period:

- Georgia Power installed 15 monitoring wells and 1 piezometer at Cells 5 & 6 and 7 & 8 from April 17 to May 24, 2023. The Well Installation Report is included in Appendix B.

2.2 Detection Monitoring Program

Georgia Power currently monitors groundwater associated with the Landfill under the detection groundwater monitoring program in accordance with § 257.94 and Solid Waste Management Rule 391-3-4-.10(6). The semi-annual detection monitoring event occurred in February 2023. Groundwater samples were collected from monitoring wells in the groundwater monitoring system (Figure 2) and analyzed for:

- CCR Rule Appendix III constituents
- A state-modified Appendix I list of detection constituents according to GA EPD Rules for Solid Waste Management 391-3-4-.10 and the approved Groundwater Monitoring Plan (GWMP). The state-modified analyte list includes antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc.
- Field parameters recorded during sampling, including pH, temperature, turbidity, dissolved oxygen (DO), specific conductance, and oxidation-reduction potential (ORP).

Background sampling in accordance with § 257.94 for the newly installed wells at Cells 5 & 6 and 7 & 8 occurred in June 2023. Groundwater samples were collected from monitoring wells and analyzed for:

- CCR Rule Appendix III and IV constituents
- A state-modified Appendix I list of detection constituents according to GA EPD Rules for Solid Waste Management 391-3-4-.10 and the approved GWMP. The state-modified analyte list

**2023 Semi-Annual Groundwater Monitoring and Corrective Action Report
Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10
2 Groundwater Monitoring Activities**

includes antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc.

- Field parameters recorded during sampling, including pH, temperature, turbidity, DO, specific conductance, and ORP.

2.3 Additional Sampling and Analyses

An ephemeral spring at the Site, as shown on Figure 2, is checked for water during each groundwater sampling event. Water was present in the spring during the February 2023 sampling event. The spring sampling results are included in laboratory reports discussed in Section 3.5.

In addition to routine Appendix I and CCR Rule Appendix III constituents, groundwater samples from the February 2023 event were analyzed for major cations and anions. The chemical composition of groundwater based on major ion chemistry data will be used to evaluate groundwater quality. Results are included in laboratory reports discussed in Section 3.5.

3 Sample Methodology & Analyses

The following section presents a summary of the field sampling procedures that were implemented and the groundwater sampling results that were obtained in connection with the detection monitoring program conducted from January through June 2023.

3.1 Groundwater Elevation Measurements and Flow Direction

Prior to each sampling event, groundwater levels were recorded at each monitoring well and piezometer at the Landfill. The calculated groundwater elevations for the February 2023 sampling event are presented in Table 3.

The groundwater elevation data were used to develop potentiometric surface elevation contour maps (Figures 3 and 4). Review of Figures 3 and 4 shows that groundwater elevations vary between landfill cells due to topographic variations in the overburden-bedrock aquifer. Groundwater elevations are similar between the overburden and the upper bedrock at most onsite locations indicating hydraulic communication between the saturated overburden and upper bedrock. The general direction of groundwater flow in the overburden of Landfill Cells 1 & 2 and 9 & 10 area is to the northeast, and to the north-northeast for bedrock. Overburden and bedrock groundwater flows to the north-northwest for Landfill Cells 3 & 4. Observed groundwater elevations and flow directions are consistent with previous observations.

3.2 Groundwater Gradient and Flow Velocity

The groundwater flow velocity at the Site was calculated using a derivation of Darcy's Law. Specifically,

$$V = \frac{K * i}{n_e}$$

Where:

V = Groundwater flow velocity $\left(\frac{\text{feet}}{\text{day}}\right)$

K = Average horizontal hydraulic conductivity of the aquifer $\left(\frac{\text{feet}}{\text{day}}\right)$

i = Horizontal hydraulic gradient $\left(\frac{\text{feet}}{\text{foot}}\right)$

n_e = Effective porosity

The general groundwater flow velocity that was calculated for the Site is based on hydraulic gradients estimated from 2023 groundwater level measurement data. Information used for the calculations is provided in Table 4. Average hydraulic conductivity values were based on previous slug test data and an estimated effective porosity of 0.01 (based on default soil type value for silty clays to clays in US EPA 530/SW-89-031 [US EPA, 1989]) for the screened horizon. The average hydraulic conductivity values used in the overburden calculations (2.54×10^{-5} centimeters/second [cm/sec] = 0.072 feet per day [ft/day]) and the bedrock calculations (1.26×10^{-4} cm/sec = 0.36 ft/day) are presented in the *Plant Bowen Coal Combustion Residuals (CCR) Landfill Groundwater Monitoring Plan* (WSP USA Environment &

**2023 Semi-Annual Groundwater Monitoring and Corrective Action Report
Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10
3 Sample Methodology & Analyses**

Infrastructure, Inc. (WSP), 2022). Results for groundwater flow velocities range from approximately 0.02 to 0.13 ft/day in the overburden and from approximately 0.03 to 0.40 ft/day in the bedrock (Table 4).

Lower groundwater velocities noted in the overburden material are due to the abundance of residual clays in this zone. Higher velocities noted in the upper bedrock are attributed to preferential groundwater flow in the fractured bedrock. Groundwater flow in the Knox Dolomite Formation, underlying the Site, occurs in joints, fractures, bedding planes, and solution channels (Croft, 1963). These pathways can facilitate relatively higher groundwater flows in the upper fractured bedrock. However, the flow rates noted in the wells screened in the upper fractured bedrock (Table 4) also suggest an abundance of residual clays in the zone where the top of the carbonate bedrock is weathered.

3.3 Continuous Water Level Monitoring (Hydrogeologic Monitoring)

Georgia Power continuously monitors groundwater level fluctuations in accordance with the *Plant Bowen Coal Combustion Residuals (CCR) Landfill Groundwater Monitoring Plan* (WSP, 2022). The hydrogeologic monitoring network provides Site-wide water level data, which are evaluated for changes in subsurface hydrologic conditions. The hydrogeologic data are evaluated weekly and reported semi-annually.

3.3.1 HYDROGEOLOGIC MONITORING NETWORK

Hydrogeologic monitoring locations shown in Figure 2 for Cells 1 & 2, 3 & 4, and 9 & 10 were selected following analysis of the interim data and review of historical groundwater elevations and potentiometric surface maps. Across the landfill cells, there are a total of 33 wells as of June 2023 currently equipped with transducers for monitoring water levels. There were previously 37 wells equipped with transducers, of which four were removed from the monitoring network on October 12, 2022, due to the landfill expansion. Transducers will be installed following the evaluation of hydrogeologic conditions at newly installed wells in Cells 5 & 6 and 7 & 8.

For the hydrogeologic monitoring network, Georgia Power utilized In-Situ® Instruments, Inc.'s Win-Situ® reporting software and Level Troll 500® pressure transducers. Each pressure transducer was deployed in a selected monitoring well at a fixed depth and linked to its own telemetry box with a vented transducer cable. Groundwater levels were recorded multiple times daily from each well transducer, and each transducer was programmed to record fluctuations in water levels of ± 0.5 feet occurring within four-hour recording schedules. The telemetry system relays water level data via satellite to a central data storage unit that can be accessed in real-time over the internet; whereby, the data can be checked for anomalous groundwater level fluctuations. Groundwater elevations, along with the river stage elevations and rainfall data, recorded between December 12, 2022 and June 6, 2023, are provided in two monitoring reports for the three disposal cell units in Appendix C: Memoranda on Hydrogeologic Monitoring Program.

During the reporting period, transducers from wells GWA-24R, GWA-36RA, GWA-41R, GWC-7Z, GWC-47, and GWC-47R, had issues with the telemetry systems and data upload. SCS staff corrected these issues and data logging and transmission has been reestablished.

The United States Geological Survey (USGS) river gauge (#02394670) at Cartersville, Georgia was used to monitor the surface water elevations in the Etowah River. Rainfall data are also obtained from the USGS station #02394670 on the Etowah River at Georgia Route 61 and from an on-site rain gauge.

**2023 Semi-Annual Groundwater Monitoring and Corrective Action Report
Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10
3 Sample Methodology & Analyses**

3.3.2 HYDROGEOLOGIC MONITORING RESULTS

Over the 2023 semi-annual monitoring period from December 12, 2022 through June 6, 2023, the hydrogeologic monitoring network pressure transducers were operational and collected continuous groundwater elevation data, with the exceptions described in Appendix C and in Section 3.3.1. Table 1 in the hydrogeologic monitoring memoranda (Appendix C) lists identified data anomalies, their causes, and major maintenance efforts during the monitoring period. Observed disruptions in the transducer water levels were found to be directly attributed to: (a) drawdown during sampling events, water level gauging, and well development, (b) maintenance of wells, transducers, or telemetry units, or (c) rainfall events (greater than 1.5 inches of rain). Hydrogeologic monitoring data for the 2023 semi-annual monitoring period did not show water level fluctuations or sudden decreases in groundwater elevation data attributed to subsurface changes that might be indicative of land subsidence or sinkhole formation.

3.4 Groundwater Sampling

For the 2023 semi-annual monitoring period, groundwater samples were collected during one detection monitoring event in February 2023 and verification events in March and April 2023. Sampling procedures were conducted in accordance with US EPA Region 4 Laboratory Services and Applied Science Division operating procedures (US EPA 2013, 2017). Monitoring wells were purged and sampled using low-flow sampling procedures. Dedicated or non-dedicated low-flow pneumatic bladder pumps were used to purge and sample the wells. A SmartTroll® or AquaTroll® (In-Situ® field instrument) was used to monitor and record field water quality parameters (pH, specific conductance, DO, temperature, and ORP) and a Hach 2100Q was used to measure turbidity during well purging to verify stabilization prior to sampling.

Groundwater samples were collected when the following stabilization criteria were met for three consecutive readings:

- pH \pm 0.1 Standard Units
- Specific conductance \pm 5%
- \pm 10% for DO where DO > 0.5 milligrams per liter (mg/L). No criterion applies if DO < 0.5 mg/L.
- Turbidity measurements less than five Nephelometric Turbidity Units (NTUs), or between five and ten NTUs after three hours of purging.
- Temperature – Record only, not used for stabilization criteria.
- ORP – Record only, not used for stabilization criteria.

Once stabilization was achieved, samples were collected into appropriately preserved laboratory-supplied sample containers. Sample bottles were placed in ice-packed coolers and submitted to Pace® Analytical Services (Pace) in Peachtree Corners (Atlanta), Georgia following standard chain-of-custody protocol. Stabilization logs and equipment calibration forms are included in Appendix D.

3.5 Laboratory Analyses

Laboratory analyses were performed by Pace, of Peachtree Corners (Atlanta), Georgia. Pace is accredited by National Environmental Laboratory Accreditation Program (NELAP) and maintains a NELAP certification for the constituents analyzed. In addition, Pace is certified to perform analysis by the State of Georgia. Groundwater data laboratory reports and chain-of-custody records for the monitoring events are presented in Appendix D.

The groundwater analytical results from the February 2023 detection events and the March and April 2023 verification events are summarized in Tables 5 and 6. Laboratory analytical results for the wells installed in April-May 2023 at Cells 5 & 6 and 7 & 8 will be included in the 2023 Annual Groundwater Monitoring and Corrective Action Report. The Pace laboratory reports associated with these results are provided in Appendix D. The pH field measurements recorded during the detection monitoring and verification sampling events are also provided in Tables 5 and 6.

3.6 Quality Assurance & Quality Control

During each sampling event, quality assurance/quality control (QA/QC) samples were collected. Equipment blanks (where non-dedicated sampling equipment is used) were collected at a rate of one QA/QC sample per ten groundwater samples. Blind field duplicate samples were collected by filling additional containers at the same location during the sampling event at a rate of one QA/QC sample per ten groundwater samples. Field blanks were also collected to evaluate ambient conditions at the sampling locations at a rate of one QA/QC sample per ten groundwater samples.

QA/QC of the groundwater data were assessed by performing a data quality evaluation of the reported laboratory results. A data quality evaluation was conducted on the data using laboratory precision and accuracy, and analytical method requirements (US EPA, 2002). The data are considered usable for meeting project objectives, and the results are considered valid. In addition to collecting QA/QC samples, the data were validated based on the pertinent methods referenced in the laboratory reports, professional and technical judgment, and applicable federal and site-specific guidance documents (US EPA, 2011; US EPA, 2017). The data quality evaluations are included in Appendix D.

The analytical results provided in Tables 5 and 6 provide concentrations from the groundwater sampling events as reported by the laboratory.

4 Statistical Analysis

This section presents a summary of the statistical approach applied to assess the 2023 semi-annual groundwater data for potential SSIs of permit stipulated constituents reported in downgradient compliance wells relative to the available historical dataset. The statistical analyses used at the Site for Appendix I and Appendix III constituents were conducted pursuant to 40 CFR § 257.93 and Rule 391-3-4-.10 in accordance with the recommended statistical methodology provided in 2017 by MacStat Consulting, Ltd. and based on methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities*, Unified Guidance, March 2009, EPA 530/R-09-007 (US EPA, 2009), herein after referred to as the Unified Guidance.

On August 12, 2019, Georgia Power submitted a minor permit modification of the former permit to GA EPD to allow for the inclusion of intrawell methods for Appendix I D&O constituents. This approach was approved by GA EPD in a letter dated August 20, 2019. On February 26, 2021, Georgia Power submitted a minor modification to implement a two-step statistical approach for the detection monitoring program to address initial SSIs over background for constituents currently analyzed using an intrawell statistical approach. This approach was approved by GA EPD in a letter dated April 19, 2021, and in the December 2022 GWMP. The two-step analysis is similar in concept to the procedure used in compliance monitoring programs where an interwell statistical limit is used to determine “background” (Unified Guidance, Chapter 7, Section 7.5).

On February 25, 2022, Georgia Power updated the Statistical Analysis Method Certification (certified by a registered Professional Engineer) to combine Cells 1 & 2 and Cells 9 & 10 overburden and bedrock wells because both units comprise the uppermost aquifer for groundwater monitoring purposes.

4.1 Statistical Methods

Descriptions of the statistical analyses of groundwater quality data obtained in the Groundwater Stats Consulting, LLC (GSC) Statistical Analysis Reports are provided in Appendix E. Table 7 provides a summary of the statistical methodology used at the Site for the February 2023 event. Sanitas™ groundwater statistical software was used to perform the statistical analyses. Sanitas™ is a commercially available decision support software package that incorporates the statistical tests required of Subtitle C and D facilities by US EPA regulations and guidance as recommended in the Unified Guidance (US EPA, 2009). Detailed statistical methods used for Appendix I and Appendix III constituents are discussed in statistical analysis packages provided in Appendix E and summarized in Section 4.1.1.

4.1.1 APPENDIX I AND APPENDIX III STATISTICAL METHOD

Intrawell and interwell methods were used to analyze the February 2023 detection groundwater monitoring event results, as summarized in Table 7. Eligibility for intrawell methods is discussed in detail in the Statistical Analysis Reports (Appendix E).

In instances where a potential SSI was identified by intrawell statistical methods, interwell statistical methods were used as a second step to determine if the initial potential SSI was below a sitewide background limit. If the concentrations were above both the intrawell and interwell prediction limits, then

2023 Semi-Annual Groundwater Monitoring and Corrective Action Report

Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10

4 Statistical Analysis

an additional verification sampling (i.e., one of two resampling) was collected to verify the potential SSI. When a resample analytical result was below the intrawell prediction limit, then the result was not declared an SSI. If the resample analytical result was above the prediction limit or a resample was not collected, then the SSI was verified and declared.

In instances where a potential SSI was identified by interwell statistical methods, a resample was collected to verify the initial result. When a resample analytical result was below the prediction limit, then the result was not declared an SSI. If the resample analytical results was above the prediction limit or a resample was not collected, then the SSI was verified and declared.

Background data were tested using the Sen's Slope/Mann Kendall or linear regression trend test to confirm suspected increasing or decreasing trends (Appendix E). The distribution of the data determined which trend test was used.

4.2 Statistical Analyses Results

Statistical analysis of the February 2023 event Appendix I and Appendix III constituent data is provided in Appendix E. The February 2023 data, along with necessary verification groundwater data, were statistically evaluated by GSC.

Using the statistical analysis approach described in Section 4.1 for the detection monitoring data and associated verification data, potential SSIs from the February 2023 event for Appendix I and Appendix III constituents are presented in Tables 8 and 9 below, respectively. Potential SSIs addressed by previously submitted alternate source demonstrations (ASDs) or not verified via re-sampling are indicated in the footnotes.

** ASD previously submitted. Refer to Section 5 for more information.

5 Alternate Source Demonstration

Alternate source demonstrations were previously submitted to GA EPD under separate report covers to address SSIs of Appendix I and Appendix III constituents. Based on GA EPD guidance, ASDs no longer require concurrence if an SSI has not been detected for two consecutive events, which indicates natural variability. SSIs confirmed during this reporting period are addressed by previous ASDs listed below. SSIs addressed in previous ASDs that were not confirmed during this reporting period are noted in the table.

During this reporting period, an ASD was submitted to address SSIs for sulfate and TDS identified during the August 2022 event and is noted in the table below (Appendix F). As described in the ASD, the occurrence of SSIs for sulfate and TDS in well GWC-23R are attributed to natural variation. Supporting evidence for this conclusion includes CCR Rule Appendix III indicator parameters boron, chloride, fluoride, and pH are undetected or detected in very low concentrations; the similarity in groundwater geochemistry when compared to upgradient wells; and decreasing water levels contrast with increasing sulfate, and TDS concentrations. Additionally, the statistical evaluation of recent groundwater data, including the February 2023 sampling event, does not identify an SSI of sulfate.

The ASD for beryllium, chloride, and mercury, originally submitted in November 2022, was updated during this reporting period in April 2023. The updated ASD is included in Appendix F.

Alternate Source Demonstration	Constituent	Well	Status of Approval by GA EPD

6 Monitoring Program Status

Groundwater monitoring for the Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10 is in the detection monitoring phase. In February 2023, the first semi-annual detection monitoring event of 2023 was conducted, and no SSIs were verified. Potential SSIs of three Appendix III (calcium, pH, and TDS) were identified. Those potential SSIs are addressed with ASDs submitted in April 2018, August 2020, November 2022, and May 2023. A potential SSI of one Appendix I constituent (mercury in GWC-48) was identified and was not verified with resampling in March 2023. A potential SSI of one Appendix III constituent (TDS in GWC-13) was identified and was not verified with resampling in April 2023. Groundwater monitoring at Plant Bowen Landfill Cells 1 & 2, 3 & 4, 9 & 10 will continue in the detection monitoring phase.

7 Conclusions & Future Actions

This 2023 Semi-Annual Groundwater Monitoring and Corrective Action Report for Georgia Power's Plant Bowen Landfill Cells 1 & 2, 3 & 4, 5 & 6, 7 & 8, and 9 & 10 was prepared to fulfill the requirements of both applicable federal and state CCR Rules and GA EPD Solid Waste Management Rules (40 CFR § 257.90(e) and 391-3-4-.10).

In February 2023, no verified SSIs of Appendix III and Appendix I constituents were identified. The potential SSIs were either addressed by resampling results not verifying the initial analytical results or previous ASDs. These potential SSIs identified during the semi-annual reporting period are not thought to be the result of a release from the Landfill Cells 1 & 2, 3 & 4, and 9 & 10 and are attributed to natural variability of groundwater chemistry underlying the Site. Groundwater monitoring at Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10 will continue in the detection monitoring phase. The next 2023 semi-annual groundwater monitoring event is scheduled for July-August 2023. Upcoming background sampling events will be included in future reports.

Notes:

- (1) NAD83 indicates elevation in feet (ft) referenced to the North American Datum of 1983. Coordinates are from March 2021 re-survey of the Landfill wells by Donaldson & Garret Associates, Inc.
- (2) NAVD88 indicates elevation in ft referenced to the North American Vertical Datum 1988. Elevations are from March 2021 re-survey of the Landfill wells by Donaldson & Garret Associates, Inc.
- (3) Screen elevations calculated using depth below ground surface and ground surface elevations from the March 2021 re-survey.
- (4) Detection well measured for water levels and sampled for groundwater quality.
- (5) Piezometer measured for water level only.
- (6) Total well depth provided on well construction logs.
- (7) GWC-18 screened interval lengths updated January 2023

Notes:

TOC - top of casing

NAVD88 indicates the North American Vertical Datum 1988. Elevations from March 2021 re-survey of the Landfill wells by Donaldson & Garret Associates, Inc.

(1) Groundwater wells in Cells 5 & 6 and 7 & 8 are newly installed and were not in place at the time of sampling. No water levels were collected for this event.

Notes:

The average hydraulic conductivity values, measured in centimeters/second (cm/sec) used in the soil aquifer calculations (2.54×10^{-5} cm/sec = 0.072 ft/day) and the bedrock aquifer calculations (1.26×10^{-4} cm/sec = 0.36 ft/day) are presented in the 2002 Plant Bowen Proposed Coal Combustion By-Product Storage Facility Site Acceptability Report. An estimated effective porosity of 0.01 (based on default soil type value for silty clays to clays in USEPA 530/SW-89-031) of the screened horizon.

Notes:

1. Results for constituents are reported in milligrams per liter (mg/L). pH reported in standard units (s.u.).
2. < indicates the constituent was not detected above the analytical method detection limit (MDL) shown.
3. J indicates the constituent was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value. Therefore, the value displayed (value J) is qualified by the laboratory as an estimated number.
4. Appendix III - indicator parameters evaluated during Detection Monitoring.

Notes:

1. Results for constituents are reported in milligrams per liter (mg/L). pH reported in standard units (s.u.).
2. < indicates the constituent was not detected above the analytical method detection limit (MDL) shown.
3. J indicates the constituent was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value. Therefore, the value displayed (value J) is qualified by the laboratory as an estimated number.
4. Appendix III - indicator parameters evaluated during Detection Monitoring.
5. NA indicates constituent was not analyzed.

**TABLE 7
STATISTICAL METHOD SUMMARY**

Statistical Methodology	Data Screening on Proposed Background	Evaluate outliers, trends, and seasonality when sufficient data are available
	Statistical Limits	Interwell statistical limits are applied on a parameter basis, depending on the appropriateness of the method as determined by the Analysis of Variance. Intrawell statistical limits are applied on a parameter basis, depending on the appropriateness of the method.
	Prediction Limits	When data contain between 15-50% non-detects the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit. Non-parametric means data sets contain greater than 50% non-detects or data are not normally or transformed-normally distributed.
	Management of Non-Detects	When data contain less than 15% non-detects in background, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the practical quantitation limit (PQL) as reported by the laboratory. When data contain between 15-50% non-detects the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
	Confidence Intervals	Used in Assessment and Corrective Action monitoring.
	No Statistical Testing	Statistical testing is not required for parameters containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
	Verification Resample Plan	Optional 1-of-2 with minimum of 8 samples per well for interwell testing. Optional 1-of-3 or 1-of-2 with minimum of 8 samples per well for intrawell testing.
	Optional	<ul style="list-style-type: none"> ▪ Interwell statistical methods may be used as a second step to determine if an apparent statistically significant increase (SSI) identified by intrawell statistical methods is below sitewide background. ▪ Initial statistical exceedance warrants independent resampling within 90 days. ▪ If resample passes, well/parameter is not a confirmed SSI. ▪ If resample exceeds, well/parameter has a confirmed SSI. ▪ If no resample is collected, the original result is deemed verified.

 2. Data Sources: Landfill Boundaries, Site Boundary, Monitoring Well, Flow Arrow, and Contour locations provided by Southern Company Services and Wood Environment & Infrastructure Solutions
 3. Plant imagery provided by client. Supplemental Background: Esri Community Maps Contributors, © OpenStreetMap, Microsoft, Esri, HERE, Garmin, SafeGraph, GeoTechnologies, Inc, METI/NASA, USGS, EPA, NPS, US Census Bureau, USDA, Source: Esri, Maxar, Earthstar Geographics, and the GIS User Community, Esri, HERE, Garmin, SafeGraph, FAO, METI/NASA, USGS, EPA, NPS

668.54 Groundwater Elevation (ft NAVD88)

* Indicates groundwater elevation in well GWC-13RZ and GWA-2 were not used in contouring.

APPENDIX A WELL INSPECTIONS

Groundwater Monitoring Well Integrity Form

Site Name Bowen LF
 Permit Number _____
 Well ID GWA-1
 Date 2/6/23

	yes	no	n/a
1 Location/Identification			
a Is the well visible and accessible?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well properly identified with the correct well ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well in a high traffic area and does the well require protection from traffic?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7 Corrective actions as needed, by date:

 Well ID GWA-50R
 Date 2/6/23

	yes	no	n/a
1 Location/Identification			
a Is the well visible and accessible?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well properly identified with the correct well ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well in a high traffic area and does the well require protection from traffic?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7 Corrective actions as needed, by date:

b Is the well properly identified with the correct well ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well in a high traffic area and does the well require protection from traffic?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7 Corrective actions as needed, by date:

Signature and Seal of PE/PG responsible for inspection

Groundwater Monitoring Well Integrity Form

Site Name Bowen LF
 Permit Number _____
 Well ID GWA-39Z
 Date 2/16/23

	yes	no	n/a
1 Location/Identification			
a Is the well visible and accessible?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well properly identified with the correct well ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well in a high traffic area and does the well require protection from traffic?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?

3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

CERTIFICATION STATEMENT

I hereby certify that this *Well Installation Report – Plant Bowen Landfill Cells 5 & 6, and 7 & 8* has been prepared by, or under the direct supervision of, a Qualified Groundwater Scientist with Stantec Consulting Services, Inc. and is in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule [40 Code of Federal Regulations 257 Subpart D], specifically §257.91(e)(1), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10.

According to 391-3-4-.01, a Qualified Groundwater Scientist is “a professional engineer or geologist registered to practice in Georgia who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields that enable that individual to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.”

1.0 Introduction

Stantec Consulting Services Inc. (Stantec) is submitting this Well Installation Report to Southern Company Services, Inc. (SCS) and Georgia Power Company (Georgia Power), which documents the construction of sixteen (16) monitoring wells at Plant Bowen in Euharlee, Georgia (Site). Well construction activities were performed in general accordance with the standards described in the Resource Conservation and Recovery Act (RCRA) Technical Enforcement Guidance Document (1986) and the Georgia Water Wells Standards Act of 1985, as updated. Well installations were completed to meet the requirements promulgated in the United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule [40 Code of Federal Regulations (CFR) Part 257, Subpart D], specifically 40 CFR §257.91(e)(1) and Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10.

Georgia Power is preparing to expand its Plant Bowen CCR Disposal Facility landfill to the southeast of current Cells 3 & 4 with the construction of Cells 5 through 8. The sixteen (16) newly installed monitoring wells were installed to augment existing detection monitoring system and monitor the groundwater conditions around these new disposal cells at the Site. The well details are included in Table 1: Well Construction Details and the location is shown in Figure 1: Well Location Map. This report provides details for the drilling and installation of 16 wells.

2.0 Well Drilling and Construction Activities

Cascade Drilling, LP, under contract with SCS Civil Field Services, drilled and installed 16 wells between April 17-May 24, 2023. Cascade had a current and valid bond with the Water Wells Standards Advisory Council for the state of Georgia at the time of drilling (Appendix A). The driller's name is provided on the boring/construction diagrams presented in Appendix B.

An experienced Stantec geologist was present on site to oversee and record the drilling and well construction under the supervision of a professional geologist registered to practice in Georgia. Drilling methods employed for borehole advancement were roto-sonic drilling techniques. The drilling equipment consisted of a TSI 150cc Track-Mounted Compact Crawler Sonic drilling rig and a Prosonic sonic rig, equipped with 4-inch sonic rods with a 6-inch outer-casing sleeve. During the drilling, continuous core samples were logged and photographed in the field for lithologic properties. Appendix B contains the subsurface boring logs. Geophysics borehole logging was conducted by Collier Geophysics at four locations during drilling to aid in evaluating bedrock conditions and selection of screened interval. The geophysical logs consisted of a combination of acoustic televiewer, optical televiewer, caliper, fluid conductivity, fluid temperature, natural gamma, single point resistance, spontaneous potential and normal resistivity. The borehole geophysics report is included as Appendix C.

Wells were constructed at each boring using factory-cleaned and sealed Schedule 40 polyvinyl chloride (PVC) products with flush-threaded fittings. 16 wells were constructed with a 10-foot section of 2-inch outer diameter (OD) and 2-inch inner diameter (ID), flush-threaded, 0.010-inch factory-slotted PVC, U-Pack screens. The annulus of the U-Pack screen section was filled with Southern Products and Silica Gravel Pack #1 (16-50) filter sand. The screen was placed near the bottom of the borehole, with the

Well Installation Report
Plant Bowen Landfill Cells 5 & 6, and 7 & 8
3.0 Well Development Activities

remainder of the well, constructed from 10-foot sections of 2-inch ID, flush-threaded, PVC casing riser. A flush-threaded PVC end cap was placed on the bottom of the well to provide a 0.4-foot sump/sediment trap, and the top of the well to extend to approximately 2.5 feet above grade. Construction details for the wells are shown on the well installation log (Appendix B). The PVC products used were American Society for Testing and Materials (ASTM) and National Sanitation Foundation (NSF) rated.

Following placement of the screen and casing, the annular space in the borehole adjacent to the screen was filled with Southern Products and Silica Gravel Pack #1 (16-50) sand. The filter pack sand was gravity poured into the borehole and extended approximately 2 to 3 feet above the depth of the top of the screen, then tamped into place. Immediately following placement of the filter pack, the wells were pumped using a portable submersible pump until visibly clear water was discharged. A filter pack seal was placed, using PelPlug 3/8-inch coated bentonite pellets, on top of the filter pack; thickness of each seal was a minimum of 2 feet. HolePlug coarse bentonite chips were also placed on top of the filter pack seal until reaching the top of groundwater. The bentonite was hydrated using both natural formation water and potable water and allowed to cure for approximately 24 hours prior to grouting the wells.

Following hydration of the bentonite, the remaining annular space was grouted with an AquaGuard® bentonite grout mixture to approximately 2 feet below ground surface using a tremie method. Based on information provided by the product manufacturer, AquaGuard® is a bentonite grout consisting of bentonite and additives that allow for a mixture of 30% solids by weight to facilitate grouting via tremie pipe, with additives that slow the bentonite curing so that proper placement can be achieved. Each well surface completion consists of a locked, aluminum protective casing and a 4-foot by 4-foot by 4-inch concrete pad with a name plate showing the well name, along with four concrete filled bollards surrounding the pad. The annular space of the aluminum protective casing was filled with pea gravel to approximately 2 inches from top of PVC. A weep hole was drilled into the lower side of the protective casing.

3.0 Well Development Activities

Resolute Environmental and Water Resources Consulting (Resolute) conducted development activities on May 3, 2023, and completed, June 2, 2023. Well Development activities were performed) in accordance with the approved Groundwater Monitoring Plan for Plant Bowen Landfill (October 2022)

. Wells were initially pumped and surged using a Reclaimer pump system. During development, water quality measurements of pH, temperature, specific conductance, oxidation reduction potential (ORP), dissolved oxygen (DO), and turbidity were periodically collected using field-calibrated water quality equipment.

During development activities, water quality measurements were conducted utilizing an AquaTroll® multimeter and a Hach turbidimeter. Water level measurements were collected using a decontaminated electronic water level indicator, referenced to a permanent marking at the top of the casing and recorded to within 0.01 foot.

Equipment Calibration and Well Development Forms are included in Appendix D. Resolute completed a well Development Form for the well, documenting well location, development date(s), elapsed time since development started, depth to water, purge rate, cumulative purge volume, and water quality parameter

Well Installation Report
Plant Bowen Landfill Cells 5 & 6, and 7 & 8
4.0 Well Survey

measurements throughout and at completion of the development process. Due to the high turbidity, GWA-33 required a second development. The second development occurred on 07/06/2023 and the turbidity was unable to get below 40.60 NTUs. Therefore, this well was designated as a piezometer.

4.0 Well Survey

Wells were surveyed June 7, through June 9, 2023, by Metro Survey and Engineering. The survey was completed using Leica GS18T (survey-grade) global positioning system receiver and a closed level check loop with a Leica DNA 10 digital level with a positional tolerance of 0.5/0.01' H:V. The top of the PVC casing was surveyed to 0.5 foot horizontal and 0.01-foot vertical tolerance, and a marking was made on the PVC to use for reference during future measurements. The horizontal location (i.e., northings and eastings) was recorded in feet relative to the North American Datum of 1983 (NAD) with the vertical elevation recorded in feet relative to the North American Vertical Datum of 1988. Surveyed coordinates and elevations are presented on the subsurface boring log and well installation log and on Table 1. The certified surveyor's report is attached as Appendix E.

APPENDIX A
CASCADE DRILLING BOND

Power of Attorney

KNOW ALL MEN BY THESE PRESENTS, that ATLANTIC SPECIALTY INSURANCE COMPANY, a New York corporation with its principal office in Plymouth, Minnesota, does hereby constitute and appoint: **Deanna M. French, Susan B. Larson, Elizabeth R. Hahn, Jana M. Roy, Scott McGilvray, Mindee L. Rankin, Ronald J. Lange, John R. Claeys, Roger Kaltenbach, Guy Armfield, Scott Fisher, Andrew P. Larsen, Nicholas Fredrickson, William M. Smith, Derek Sabo, Charla M. Boadle**, each individually if there be more than one named, its true and lawful Attorney-in-Fact, to make, execute, seal and deliver, for and on its behalf as surety, any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof; provided that no bond or undertaking executed under this authority shall exceed in amount the sum of: **unlimited** and the execution of such bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof in pursuance of these presents, shall be as binding upon said Company as if they had been fully signed by an authorized officer of the Company and sealed with the Company seal. This Power of Attorney is made and executed by authority of the following resolutions adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-fifth day of September, 2012:

Resolved: That the President, any Senior Vice President or Vice-President (each an "Authorized Officer") may execute for and in behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and affix the seal of the Company thereto; and that the Authorized Officer may appoint and authorize an Attorney-in-Fact to execute on behalf of the Company any and all such instruments and to affix the Company seal thereto; and that the Authorized Officer may at any time remove any such Attorney-in-Fact and revoke all power and authority given to any such Attorney-in-Fact.

Resolved: That the Attorney-in-Fact may be given full power and authority to execute for and in the name and on behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and any such instrument executed by any such Attorney-in-Fact shall be as binding upon the Company as if signed and sealed by an Authorized Officer and, further, the Attorney-in-Fact is hereby authorized to verify any affidavit required to be attached to bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof.

This power of attorney is signed and sealed by facsimile under the authority of the following Resolution adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-fifth day of September, 2012:

Resolved: That the signature of an Authorized Officer, the signature of the Secretary or the Assistant Secretary, and the Company seal may be affixed by facsimile to any power of attorney or to any certificate relating thereto appointing an Attorney-in-Fact for purposes only of executing and sealing any bond, undertaking, recognizance or other written obligation in the nature thereof, and any such signature and seal where so used, being hereby adopted by the Company as the original signature of such officer and the original seal of the Company, to be valid and binding upon the Company with the same force and effect as though manually affixed.

IN WITNESS WHEREOF, ATLANTIC SPECIALTY INSURANCE COMPANY has caused these presents to be signed by an Authorized Officer and the seal of the Company to be affixed this twenty-seventh day of April, 2020.

By *Paul J. Brehm*
Paul J. Brehm, Senior Vice President

STATE OF MINNESOTA
HENNEPIN COUNTY

On this twenty-seventh day of April, 2020, before me personally came Paul J. Brehm, Senior Vice President of ATLANTIC SPECIALTY INSURANCE COMPANY, to me personally known to be the individual and officer described in and who executed the preceding instrument, and he acknowledged the execution of the same, and being by me duly sworn, that he is the said officer of the Company aforesaid, and that the seal affixed to the preceding instrument is the seal of said Company and that the said seal and the signature as such officer was duly affixed and subscribed to the said instrument by the authority and at the direction of the Company.

Alison Nash-Trout
Notary Public

I, the undersigned, Secretary of ATLANTIC SPECIALTY INSURANCE COMPANY, a New York Corporation, do hereby certify that the foregoing power of attorney is in full force and has not been revoked, and the resolutions set forth above are now in force.

Signed and sealed. Dated 12 day of April, 2021.

This Power of Attorney expires
January 31, 2025

Alpharetta, Georgia 30009

RE: Geophysical Letter Report | Project #230155
Geophysical Borehole Logging, Plant Bowen, Bartow County, Georgia

Collier Geophysics performed geophysical borehole logging services in four borings located at Plant Bowen, in Bartow County, Georgia. The field investigation was performed during four separate mobilizations between May 2, 2023 and May 20, 2023. This investigation was conducted to aid Stantec in evaluating bedrock conditions. The geophysical logs consisted of a combination of acoustic televiewer, optical televiewer, caliper, fluid conductivity, fluid temperature, natural gamma, single point resistance (SPR), spontaneous potential (SP), and normal resistivity. The survey was led by Collier Geophysicist Eric Armstrong. The following report presents results from the geophysical investigation and summarizes the site conditions, field methods, data acquisition, and interpretation procedures.

The logging data was analyzed to determine the location and orientation of fractures. In addition to these data sets, synthetic caliper logs were calculated from the acoustic televiewer travel time data to aid in the interpretation. Dip and azimuth (dip direction) were calculated for each detected fracture based on the televiewer datasets.

Boring Descriptions

A summary of the four logged boreholes is presented in the table below. All depths are referenced from ground surface.

Borehole ID:	GWC-27R	GWC-29R	GWC-31R	GWA-34R
Appr. Casing Diameter:	5.5 in	6.0 in	6.0 in	5.5 in
Casing Material:	Steel	Steel	Steel	Steel
Appr. Open Hole Diameter:	6.2 in	4.9 in	8.3 in	9.4 in
Open Hole Section:	49.2-88.6 ft	97.1-105.0 ft	75.9-90.4 ft	86.8-92.0 ft

Equipment and Methodology

Acoustic Televiewer

Acoustic televiewer (ATV) logging produces a high resolution, magnetically oriented digital image of the borehole wall to map the location and orientation of intersecting fractures, foliations, and lithologic contacts. The Acoustic televiewer tool emits a rotating, narrow, acoustic beam that is reflected off the borehole wall. The travel time and amplitude of the reflected wave are recorded by the tool and used to create borehole images. Both datasets are useful for identifying the location and orientation of fractures. The amplitude of the reflected signal will decrease at the

location of fractures and the travel time will increase. The travel time data can also be used for developing a high resolution caliper log for a more comprehensive analysis of fractures. Acoustic televiewers can only be used in fluid filled boreholes. However, the fluid does not have to be optically clear for the method to work.

When operating the ATV, a “time window” is set based on the borehole diameter. The time window is the time interval in which the ATV instrument searches for an echo from the borehole wall. For smaller increases in borehole diameter around fractures and sections of weaker rock, the ATV typically records an accurate borehole diameter (correlates well with three-arm caliper data). However, if borehole openings are much larger than the borehole diameter, the echo from the borehole wall may fall outside the time window, or be too weak to be detected. In these situations, borehole diameters recorded with ATV may be inaccurate. Since ATV only records the reflection from the borehole wall, the data cannot be used to determine how far a fracture extends from the borehole. The acoustic televiewer has a vertical resolution of 2 millimeters.

Optical Televiewer

Optical televiewer (OTV) logging is used to record and digitize a 360-degree color image of the borehole wall. Planar features such as fractures, foliation, and lithologic contacts can be identified directly on the images. The tool is magnetically oriented in order to determine the strike and dip of features. OTV has a vertical resolution of 2mm. As a result, it is able to see features other tools may not resolve. Optical images can be collected above or below the water surface, provided the water is sufficiently clear for viewing the borehole wall.

3-Arm Caliper

Caliper logging is used to generate a profile of the borehole diameter with depth. The tool measures the borehole diameter using three spring-loaded arms. Narrow enlargements in the borehole diameter can, in most cases, be attributed to fractures. Caliper logging can be conducted above and below the water surface.

Natural Gamma

Natural gamma tools measure the gamma radiation from the formation. These logs can be used to discriminate between different formations by utilizing variations in the concentration of naturally occurring radioactive isotopes such as potassium, uranium and thorium. These logs are particularly popular for correlating logs and locating clay and shale formations since radioactive elements tend to concentrate in these materials. Natural gamma logging can be conducted in cased and uncased boreholes, water-filled and dry.

Fluid Temperature

Fluid temperature logging is used to identify where water enters or exits the borehole. In the absence of fluid flow, a gradual increase on water temperature of approximately 1°F per 100 feet of depth is expected. Rapid changes in the fluid temperature indicate water-producing or water-receiving zones. Little or no temperature gradient indicates intervals of vertical flow.

Fluid Conductivity

Fluid conductivity logging is used to measure the electrical conductivity of the fluid in the borehole. Variations in fluid conductivity can be contributed to concentration variations of dissolved solids.

These differences can occur when sources of water have contrasting chemistry and have come from different transmissive zones. Fluid temperature and conductivity are measured concurrently using the same logging tool.

Single Point Resistance (SPR)

Single point resistance logging involves passing an alternate current between a surface electrode and a probe electrode and measuring the voltage difference created by the current. SPR is then calculated using Ohm's law. SPR is the sum of cable resistance, and the resistance based on the composition of the medium, the cross-sectional area and length of the path through the medium. Therefore, the single point resistance log does not provide quantitative data. In general, SPR increases with increasing grain size and decreases with increasing borehole diameter, fracture density, and the concentration of dissolved solids in the water. Single-point resistance logs are useful in the determination of lithology, water quality, and location of fracture zones.

Spontaneous Potential (SP)

SP logging is conducted to measure naturally occurring voltage differences along a borehole. The method has been found useful for delineating sandstone/shale layering and other boundaries between permeable and impermeable beds. The measurements are made with reference to an electrode at ground level. Therefore, SP logging does not provide quantitative data.

Normal Resistivity

Resistivity logging is used to characterize the rock or sediment in a borehole by measuring its electrical resistivity. Resistivity is a fundamental material property which represents how strongly a material opposes the flow of electric current. The normal resistivity probe measures the formation resistivity with two different electrode spacings (16 inches and 64 inches). These two readings are referred to as short and long resistivity, since the volume of investigation of the normal resistivity log increases with increasing electrode spacing. The log must run in holes containing electrically conductive mud or water.

Field Methodology

Collier Geophysics used a Robertson Geo logging system to collect all geophysical borehole data. Data was collected within the entire open section of the borehole where practical. All data was QC'd at the end of each day prior to demobilizing.

Results and Discussion

The logs were analyzed for fractures and other features using WellCAD software, manufactured by Advanced Logic Technology. The travel time data from the acoustic televiewer log was used to develop a maximum caliper log. Fractures were interpreted through a complete data analysis of all logs. Dip and azimuth (dip direction) were calculated for each detected fracture. The fracture data was corrected from apparent to true dip and azimuth using deviation logs included with the televiewer dataset, and from magnetic north to true north by rotating the fracture azimuths 5.2° counter-clockwise. Magnetic north is 5.2° west of true north at the site (according to National Oceanic and Atmospheric Administration). The reported azimuth is measured clockwise from true north. The televiewer centralizers had to be reduced for boring GWC-31R due to some unknown obstacles. This resulted in poor centralization and poor televiewer data quality. The open hole

section for GWA-34R was too short for the televiewers to establish orientation due to magnetic field distortion by the steel casing. As a result, only the fracture dip could be measured for this boring. A fracture summary table including fracture attributes is provided in Appendix 1. Schmidt stereonet (lower hemisphere) with fracture characteristics and fracture rose diagrams are presented on Appendix 2. All logs are presented on Appendix 3. All depth measurements are referenced from ground surface.

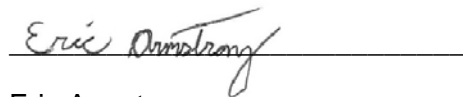

Closure

Geophysical borehole logging, like any non-intrusive investigation methods, requires the subjective interpretation of indirect measurements. As such, there is an inherent margin of error, which is unavoidable. Our methods of data acquisition and interpretation for this project are complete as is reasonably possible, and have been successfully applied by Collier geophysicists to investigations of similar size and nature. We believe the results presented herein to be a reasonable representation of the subsurface conditions. However, due to the subjective nature of any type of interpretation, we cannot guarantee that our results are accurate in all areas. In addition, all subsurface features present at the site may not have been detected or identified.

If you have any questions regarding the field procedures, data analyses, or the interpretive results presented herein, please do not hesitate to contact us. We appreciate working with you and look forward to providing Stantec with geophysical services in the future.

Respectfully Submitted,

Collier Geophysics, LLC

Calibration Report

Instrument Aqua TROLL 400
Serial Number 893479
Created 5/31/2023

Sensor	RDO
Serial Number	892164
Last Calibrated	5/31/2023

Calibration Details

Slope 0.9686157
Offset 0.00 mg/L

Calibration point 100%

Concentration 8.25 mg/L
Temperature 25.84 °C
Barometric Pressure 995.37 mbar

Sensor	Conductivity
Serial Number	893479
Last Calibrated	5/31/2023

Calibration Details

Cell Constant 0.999
Reference Temperature 25.00 °C
TDS Conversion Factor (ppm) 0.65

Sensor	Level
Serial Number	893796
Last Calibrated	Factory Defaults

Sensor	pH/ORP
Serial Number	21688
Last Calibrated	5/31/2023

Calibration Details

Total Calibration Points 3

Calibration Point 1

pH of Buffer 4.00 pH
pH mV 49.3 mV
Temperature 25.42 °C

Calibration Point 2

pH of Buffer 7.00 pH
pH mV -124.6 mV
Temperature 24.41 °C

Calibration Point 3

pH of Buffer	10.00 pH
pH mV	-288.9 mV
Temperature	23.78 °C

Slope and Offset 1

Slope	-57.97 mV/pH

GWA-36RA	N34.135187	W84.904354	1505060.8	2073365.8	682.50	Nail on Pad

Survey Data Certification for Southern Company to determine the northing, easting and vertical elevation of the nail in the concrete pad & the top of the PVC well casing.

Date of field survey: June 7, 2023 thru June 9, 2023.

Field survey positional tolerance: 0.5 feet horizontal-NAD83(2011), 0.01 feet vertical-NAVD88.

Equipment used for horizontal location: Leica GS16 (Base Unit) and Leica GS18T (Rover Unit).

The vertical location of each well was established based upon level runs with a digital level loop from nails on concrete pads of existing wells established by others (GWC-24R Nail on pad elev.= 673.94 and GWA-36RA Nail on pad elev.=682.50) using a Leica DNA10 digital level.

**APPENDIX C
MEMORANDA ON HYDROGEOLOGIC
MONITORING PROGRAM**

To:	Kristen Jurinko, P.G. Southern Company Services, Inc.	From:	Andrew Stevens, P.G. Stantec Consulting Services Inc.
File:	Hydrogeological Monitoring Memo	Date:	June 30, 2023

Reference: Solid Waste Disposal Facility Permit No. 008-018D (CCR) -Hydrogeological Monitoring Program December 12, 2022, through June 6, 2023

Background

Stantec Consulting Services Inc. (Stantec) was retained by Southern Company Services, Inc. (SCS), to assist with the hydrogeological (water level) monitoring program at Georgia Power Company's Plant Bowen (Site) Landfill Cells 1 & 2, 3 & 4, 9 & 10. The work is being conducted to comply with Georgia Department of Natural Resources Environmental Protection Division (GA EPD) Solid Waste Permit No. 008-018D (CCR) to assist with early detection of subsurface changes that might indicate land subsidence or sinkhole formation. Groundwater level fluctuations are monitored in accordance with 2022 CCR Permit Groundwater Monitoring Plan.

The Site utilizes In-Situ[®] Inc telemetry and reporting software and pressure transducers to collect and record groundwater elevations from monitoring wells located around the perimeter of the landfill cells. The program was initiated in 2014 at Cells 1 & 2, expanded in 2015, 2016 and 2023 to Cells 3 & 4, Cells 9 & 10 and Cells 5 & 6 & 7 & 8, respectively. Four transducers were removed from the monitoring network on October 12, 2022 due to landfill expansion. These transducers will be redeployed after the evaluation of hydrogeologic conditions at new well installs at Cells 5&6 and 7&8 in June 2023. During this reporting period transducers were deployed in overburden and bedrock wells as follows:

Cells 1 & 2:

- Six overburden wells (GWA-1 (overburden/bedrock), GWA-3A, GWC-7Z, GWC-11, GWC-13, and GWC-15)
- Six bedrock wells (GWA-2R, GWC-6RZ, GWC-8RR, GWC-11R, GWC-13R, and GWC-15R)

Cells 3 & 4:

- Three overburden wells (GWC-18, GWA-36A, GWA-37)
- Six bedrock wells (GWC-16R, GWC-18R, GWC-21R, GWC-24R, GWC-25R, GWA-36RA)

Cells 9 & 10:

- Six overburden wells (GWA-39Z, GWA-41, GWA-43, GWC-45, GWC-47, and GWC-49Z)
- Six bedrock wells (GWA-39RZ, GWA-41R, GWA-43R, GWC-45R, GWC-47R, and GWC-49R)

Reference: Solid Waste Disposal Facility Permit No. 008-018D (CCR) - Hydrogeological Monitoring Program, December 12, 2022, through June 6, 2023

Water level data are electronically logged multiple times daily by each transducer. Most logged data are uploaded after each reading via satellite telemetry to a central In-Situ Inc.® database. Automated reports are accessible via the In-Situ® database website (ISI Data Center) where the telemetry data are stored and compiled.

In addition to collecting transducer data, Etowah River levels and rainfall data for the reporting period were obtained from a U.S. Geological Survey gauge (02394670) near Cartersville, Georgia.

This reporting period included the transition from In-Situ telemetry (ISI Data Center) to In-Situ VuLink® being installed in the monitoring wells. HydroVu communicates data through the global cellular network versus the existing satellite data transmission telemetry devices currently installed at the Site. The ISI to VuLink® transition occurred January 20, 2023, and May 2 through May 4, 2023 (Table 1). Data transmitted via VuLink® technology are accessed through HydroVu® online dashboard.

Maintenance Observations

During the reporting period, the following well locations were noted by Southern Company Civil Field Services (SCS-CFS) staff as having issues: GWA-24R, GWA-36A, GWA-41R, GWC-7Z, GWC-47, and GWC-47R (Table 1). The wells with transducers were visited for maintenance, manual data downloads, battery change outs, transducer replacement, desiccant replacement, solar panel adjustment, or reconnection of modem or transducer cables. Data transmission for GWC-24R was lost January 3rd, 2023. On January 20, 2023, SCS-CFS replaced the ISI to VuLink®. SCS-CFS replaced GWA-36RA transducer cable and storage cube, batteries were replaced in GWA-41R and GWC-7Z, and GWC-47 had a new TrollHub installed (Table 1). The groundwater elevations in GWA-36A rose 3.21 feet May 24th, 2023, and has stayed roughly 3 feet higher than the offset boring GWA-36RA. Resolute Environmental and Water Resources Consulting field staff checked the depth to water (DTW) at GWA-36A on May 30, 2023, there was a 2.97-foot discrepancy between the transducer water level and the field recorded water level. This change is not indicative of land subsidence or sinkhole formation. The discrepancy between the water level reported by the transducer and field recorded data is being troubleshoot and maintenance is ongoing.

Water Level Fluctuations

Continuous groundwater level data and river stage elevations for the Etowah River were recorded between December 12, 2022, and June 6, 2023. Reporting period hydrographs for Cells 1 & 2, 3 & 4, and 9 & 10 are shown in Figures 1A through 3B.

Table 1 records maintenance completed during the reporting period that resulted in water level trend anomalies. During the reporting period, manual groundwater elevation gauging and groundwater sample collection took place over the period of February 8, through February 22, 2023, as well as additional ground water sampling that occurred March 16, 2023, and April 11, 2023. These field efforts are considered known disruptions to water table and are marked on the hydrograph plots (Figures 1A through 3B). Transducer maintenance activities and repairs occur throughout the monitoring period and consist of resetting reference water elevation depths, resealing boxes, ant infestation control, replacing desiccants and replacing power controller units and batteries. Periodic sampling and maintenance may induce drifts in pressure readings. When drifts are noted, the reference depth to water is re-set and the logging cycle is re-started.

The water levels in monitoring wells equipped with transducers exhibited similar overall trends during the reporting period. Groundwater elevations show an overall stable trend during this six-month period with steadily increasing water levels from December to mid-February, then decreasing water levels from late February through early June.

The fluctuations of groundwater elevations generally mimic the Etowah River levels in response to rain events and wet conditions. Some of the hydrograph responses may be attributable to the fluctuations in

Reference: Solid Waste Disposal Facility Permit No. 008-018D (CCR) - Hydrogeological Monitoring Program, December 12, 2022, through June 6, 2023

water levels in the nearby General Service Water Pond. Similar to previous events, wells GWA-41 and GWA-41R showed rapid hydrograph responses to rainfall during the monitoring period as groundwater in both the overburden and bedrock aquifers at this location responded equally to rainfall events. During this monitoring period, the potentiometric surface of the bedrock aquifer remained above the top of competent bedrock in the instrumented monitoring wells. This higher hydrostatic pressure of the bedrock aquifer limits removal of material from the overburden that could result in subsidence issues. The observed variations in groundwater elevations are attributed to rainfall variations, or due to sampling or maintenance activities at the monitoring points. A comparison of river stage and precipitation data with recorded groundwater elevations (Figures 1A through 3B) shows that both sets of data follow similar overall patterns. Two rainfall events greater than 1.5 inches occurred during the monitoring period. First rainfall event was on January 4th (2.44 inches) and the second event was April 8th (2.21 inches) according to the U.S. Geological Survey gauge (02394670) near Cartersville, Georgia.

Conclusions and Recommendations

Observed disruptions in the transducer water levels were found to be directly attributed to (a) drawdown during sampling events, water level gauging, well development, and (b) to maintenance of wells, transducers, or telemetry units, or (c) rainfall events. December 12, 2022, through June 6, 2023, hydrologic monitoring data did not show water level fluctuations attributed to subsurface changes that might be indicative of land subsidence or sinkhole formation. Hydrogeologic monitoring will continue at Plant Bowen.

RE: Project: Bowen LF Cells 3&4
Pace Project No.: 92651771

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 10, 2023 and February 14, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

A revised report is being submitted on 4/14/23 due to a compound list reporting error.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angela Baioni for

QUALIFIERS

Project: Bowen LF Cells 3&4

Pace Project No.: 92651771

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

RE: Project: Bowen LF Cells 9 & 10
Pace Project No.: 92652194

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 14, 2023 and February 17, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

A revised report is being submitted on 4/14/23 due to a compound list reporting error.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angela Baioni for
Bonnie Vang
bonnie.vang@pacelabs.com

Sulfate	mg/L	4.3	50	50	53.9	54.6	99	101	90-110	1	10

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Bowen LF Cells 9 & 10

Pace Project No.: 92652194

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Bowen LF Cells 1 & 2
Pace Project No.: 92652951

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 17, 2023 and February 23, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

A revised report is being submitted on 4/14/23 due to a compound list reporting error.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full, without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Bowen LF Cells 1 & 2
Pace Project No.: 92652951

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

DC#_Title: ENV-FRM-HUN1-0083 v02_Sample Condition Upon Receipt

Effective Date: 11/14/2022

Laboratory receiving samples:

Asheville Eden Greenwood Huntersville Raleigh Mechanicsville Atlanta Knoxville

Sample Condition Upon Receipt

Client Name:

GA Power

Project #:

WO#: 92652951

92652951

Courier: Fed Ex UPS USPS Client Pace Other:

Custody Seal Present? Yes No Seals Intact? Yes No

Date/Initials Person Examining Contents: 2/17/23

2/17/23
[Signature]

Packing Material: Bubble Wrap Bubble Bags None Other

Biological Tissue Frozen?

Yes No N/A

Thermometer:

IR Gun ID: 230

Type of Ice: Wet Blue None

Cooler Temp:

5.5

Correction Factor:

Add/Subtract (°C) 0.0

Temp should be above freezing to 6°C

Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C):

5.5

USDA Regulated Soil (N/A, water sample)

Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? Yes No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? Yes No

			Comments/Discrepancy:
Chain of Custody Present?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	1.	
Samples Arrived within Hold Time?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	2.	
Short Hold Time Analysis (<72 hr.)?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	3.	
Rush Turn Around Time Requested?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	4.	
Sufficient Volume?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	5.

RE: Project: Bowen LF cells 9&10
Pace Project No.: 92657598

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 17, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angela Baioni for

QUALIFIERS

Project: Bowen LF cells 9&10

Pace Project No.: 92657598

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Bowen LF Cells 1&2
Pace Project No.: 92661713

Dear Cassidy Sutherland:

Enclosed are the analytical results for sample(s) received by the laboratory on April 11, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen LF Cells 1&2

Pace Project No.: 92661713

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

DATA USABILITY SUMMARY

Steven Elliott (Stantec) reviewed three data packages from Pace Analytical for the analysis of water samples collected from February 8 to February 22, 2023, at the Georgia Power Bowen Plant site. Samples were collected according to the Field Sampling Plan – Plant Bowen (Amec Foster Wheeler, 2016).

Intended Use of Data: To delineate concentrations of constituents of concern in site groundwater.

Analyses requested included:

- SW-846 6010D – Zinc and Calcium by inductively coupled plasma – atomic emission spectrometry (ICP – AES)
- SW-846 6020B – Metals by inductively coupled plasma - mass spectrometry (ICP/MS)
- SW-846 7470A – Mercury by manual cold-vapor
- EPA 300 Rev 2.1 – Chloride, fluoride, and sulfate by ion chromatography
- SM 2540C - 2015 – Total dissolved solids (TDS)
- SM 2320B – Total Alkalinity, Bicarbonate, Carbonate

Data were reviewed and validated as described in the field sampling plan and the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (November 2020). The results of the review/validation are discussed in this Data Usability Summary (DUS) and the associated Laboratory Data Review Checklists.

DATA REVIEW/VALIDATION RESULTS

Introduction

Thirty-three (33) groundwater samples, six (6) field blanks, and four (4) field duplicate samples were analyzed for one or more of the analyses listed above. Table 1 lists the field identifications cross-referenced to laboratory identifications. Table 2 is a summary of qualified data. Tables 3a through 3e summarize field duplicate results.

Analytical Results

The data packages contain a minimum of one quality control batch per analytical method analyzed. The quality control batch identifies the laboratory QC samples that correspond to the designated field samples. Not detected results are reported as less than the value of the method detection limit (MDL).

Preservation and Holding Times

The samples were evaluated for agreement with the chain-of-custody forms. The samples were received in the appropriate containers with the paperwork filled out properly. The laboratory sample condition upon receipt forms indicates all samples were received at temperatures ranging from 1.4°C to 4°C. All samples were analyzed within the technical holding time. No data were qualified.

Calibrations

Case narratives indicate Initial and continuing calibration verification data were within method acceptance criteria.

Blanks

Laboratory Method Blanks. No contamination was detected in any of the laboratory method blanks with the following exceptions:

SDG 92651771

- Chromium was detected in the method blank in batch 3939084 at a concentration of 0.0011 mg/L. No samples had reported values less than ten times the blank concentration; therefore, no qualifications were necessary.

SDG 92652194

- All method blank results were reported as not detected.

Field Blanks. Field blanks were analyzed for the full suite of sample analyses and all analytes were not detected with the following exceptions:

SDG 92651771

- All field blank results were reported as not detected.

SDG 92652194

- Mercury was detected in the field blank BOW-LF9-10-FB-13 (02/13/2023) at a concentration below the laboratory Reporting Limit (RL). Four samples (BOW-GWA-41, BOW-GWA-41R, BOW-GWA-41R, and BOW-GWA-41R) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- TDS was detected in the field blank BOW-LF9-10-FB-13 (02/13/2023) at a concentration above the laboratory Reporting Limit (RL). Seven samples (BOW-GWA-39Z, BOW-GWA-40, BOW-GWA-41, BOW-GWA-41R, BOW-GWA-41R, BOW-GWA-41R, and BOW-GWA-41R) had reported values less than 10 times the blank concentration and have been qualified as estimated.

SDG 92652951

- TDS was detected in the field blank BOW-LF1-2-FB-16 (02/16/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWA-2, BOW-GWA-2R, BOW-GWA-1, and BOW-LF1-2-FD-10) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Thallium was detected in the field blank BOW-LF1-2-FB-17 (02/17/2023) at a concentration above the laboratory Reporting Limit (RL). All associated samples were reported as not detected and since the bias is high, no qualification was necessary.
- TDS was detected in the field blank BOW-LF1-2-FB-17 (02/17/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWC-6RZ, BOW-GWA-3A, BOW-GWA-4RZ, and BOW-GWC-6) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Mercury was detected in the field blank BOW-LF1-2-FB-18 (02/20/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWC-10, BOW-GWC-11, BOW-GWC-10R, and BOW-GWC-11R) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Arsenic was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration below the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-9 and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Vanadium was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration above the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations

greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-9 and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.

- Fluoride was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration below the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-8RR and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.

Laboratory Control Samples

Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) recoveries met the laboratory acceptance criteria for all analyses.

Matrix Spike/Matrix Spike Duplicates

Site-specific MS/MSD precision and accuracy results were within the laboratory acceptance criteria with the following exceptions:

SDG 92651771

- Alkalinity had a high MS percent recovery in the sample BOW-LF3-4-FB-11. However, because the bias was high and the parent sample result was non-detect, no qualification was necessary.

SDG 92652194

- All matrix spike recoveries were within laboratory limits.

SDG 92652951

- All matrix spike recoveries were within laboratory limits.

Laboratory Duplicates

Appropriate analytical duplicates were analyzed and RPDs were within the laboratory acceptance criteria with the following exceptions:

SDG 92651771

- All laboratory duplicate RPDs were within laboratory limits.

SDG 92652194

- TDS had high laboratory duplicate RPDs in samples BOW-LF9-10-FB-13, BOW-GWA-39RZ, and BOW-GWC-47. TDS in these samples has been qualified as estimated (“J”).

SDG 92652194

- All laboratory duplicate RPDs were within laboratory limits.

Field Precision

Five sets of field duplicate samples were collected for this sampling event (see Tables 3a – 3e for sample/duplicate identification and precision calculations). The calculated RPDs between sample and duplicate were within the QAPP acceptance criteria of 25% for all analytes detected above five times the RL. For results reported less than five times the RL, with a difference between sample and duplicate less

than two times the RL are also considered acceptable (qualified “A*”). All field duplicate precision was considered acceptable with the following exceptions:

- TDS in the duplicate pair BOW-LF9-10-FD-08/ BOW-GWA-40 was detected at levels greater than five times the RL and an RPD greater than 25%. TDS in both samples has been qualified as estimated (“J”).
- TDS in the duplicate pair BOW-LF3-4-FD-07/ BOW-GWC-20R was detected at levels greater than five times the RL and an RPD greater than 25%. TDS in both samples has been qualified as estimated (“J”).

Summary

The groundwater analytical data are usable for the purpose of determining current concentrations of COCs in this medium at the affected property. A summary of qualified data is presented in Table 2 below.

J – Estimated data; the reported quantitation limit or sample concentration is approximated due to exceedance of one or more QC requirements.

J+ – The analyte was detected in an associated blank; estimated data with a high bias.

R – Rejected data due to one or more QC requirements.

UJ – The analyte was analyzed for but was detected at a level below the associated blank contamination. The associated value is an estimate and may be inaccurate or imprecise.

DATA USABILITY SUMMARY

Steven Elliott (Stantec) reviewed three data packages from Pace Analytical for the analysis of water samples collected from February 8 to March 16, 2023, at the Georgia Power Bowen Plant site. Samples were collected according to the Field Sampling Plan – Plant Bowen (Amec Foster Wheeler, 2016).

Intended Use of Data: To delineate concentrations of constituents of concern in site groundwater.

Analyses requested included:

- SW-846 6010D – Zinc and Calcium by inductively coupled plasma – atomic emission spectrometry (ICP – AES)
- SW-846 6020B – Metals by inductively coupled plasma - mass spectrometry (ICP/MS)
- SW-846 7470A – Mercury by manual cold-vapor
- EPA 300 Rev 2.1 – Chloride, fluoride, and sulfate by ion chromatography
- SM 2540C - 2015 – Total dissolved solids (TDS)
- SM 2320B – Total Alkalinity, Bicarbonate, Carbonate

Data were reviewed and validated as described in the field sampling plan and the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (November 2020). The results of the review/validation are discussed in this Data Usability Summary (DUS) and the associated Laboratory Data Review Checklists.

DATA REVIEW/VALIDATION RESULTS

Introduction

Thirty-three (33) groundwater samples, six (6) field blanks, and four (4) field duplicate samples were analyzed for one or more of the analyses listed above. Table 1 lists the field identifications cross-referenced to laboratory identifications. Table 2 is a summary of qualified data. Tables 3a through 3e summarize field duplicate results.

Analytical Results

The data packages contain a minimum of one quality control batch per analytical method analyzed. The quality control batch identifies the laboratory QC samples that correspond to the designated field samples. Not detected results are reported as less than the value of the method detection limit (MDL).

Preservation and Holding Times

The samples were evaluated for agreement with the chain-of-custody forms. The samples were received in the appropriate containers with the paperwork filled out properly. The laboratory sample condition upon receipt forms indicates all samples were received at temperatures ranging from 1.4°C to 4°C. All samples were analyzed within the technical holding time. No data were qualified.

Calibrations

Case narratives indicate Initial and continuing calibration verification data were within method acceptance criteria.

Blanks

Laboratory Method Blanks. No contamination was detected in any of the laboratory method blanks with the following exceptions:

SDG 92651771

- Chromium was detected in the method blank in batch 3939084 at a concentration of 0.0011 mg/L. No samples had reported values less than ten times the blank concentration; therefore, no qualifications were necessary.

SDG 92652194

- All method blank results were reported as not detected.

SDG 92652951

- All method blank results were reported as not detected.

SDG 92657598

- All method blank results were reported as not detected.

Field Blanks. Field blanks were analyzed for the full suite of sample analyses and all analytes were not detected with the following exceptions:

SDG 92651771

- All field blank results were reported as not detected.

SDG 92652194

- Mercury was detected in the field blank BOW-LF9-10-FB-13 (02/13/2023) at a concentration below the laboratory Reporting Limit (RL). Four samples (BOW-GWA-41, BOW-GWA-41R, BOW-GWA-41R, and BOW-GWA-41R) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- TDS was detected in the field blank BOW-LF9-10-FB-13 (02/13/2023) at a concentration above the laboratory Reporting Limit (RL). Seven samples (BOW-GWA-39Z, BOW-GWA-40, BOW-GWA-41, BOW-GWA-41R, BOW-GWA-41R, BOW-GWA-41R, and BOW-GWA-41R) had reported values less than 10 times the blank concentration and have been qualified as estimated.

SDG 92652951

- TDS was detected in the field blank BOW-LF1-2-FB-16 (02/16/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWA-2, BOW-GWA-2R, BOW-GWA-1, and BOW-LF1-2-FD-10) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Thallium was detected in the field blank BOW-LF1-2-FB-17 (02/17/2023) at a concentration above the laboratory Reporting Limit (RL). All associated samples were reported as not detected and since the bias is high, no qualification was necessary.
- TDS was detected in the field blank BOW-LF1-2-FB-17 (02/17/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWC-6RZ, BOW-GWA-3A, BOW-GWA-4RZ, and BOW-GWC-6) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Mercury was detected in the field blank BOW-LF1-2-FB-18 (02/20/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWC-10, BOW-GWC-11, BOW-GWC-10R, and BOW-GWC-11R) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Arsenic was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration below

the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-9 and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.

- Vanadium was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration above the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-9 and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Fluoride was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration below the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-8RR and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.

SDG 92657598

- All field blank results were reported as not detected.

Laboratory Control Samples

Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) recoveries met the laboratory acceptance criteria for all analyses.

Matrix Spike/Matrix Spike Duplicates

Site-specific MS/MSD precision and accuracy results were within the laboratory acceptance criteria with the following exceptions:

SDG 92651771

- Alkalinity had a high MS percent recovery in the sample BOW-LF3-4-FB-11. However, because the bias was high and the parent sample result was non-detect, no qualification was necessary.

SDG 92652194

- All matrix spike recoveries were within laboratory limits.

SDG 92652951

- All matrix spike recoveries were within laboratory limits.

SDG 92657598

- All matrix spike recoveries were within laboratory limits.

Laboratory Duplicates

Appropriate analytical duplicates were analyzed and RPDs were within the laboratory acceptance criteria with the following exceptions:

SDG 92651771

- All laboratory duplicate RPDs were within laboratory limits.

SDG 92652194

- TDS had high laboratory duplicate RPDs in samples BOW-LF9-10-FB-13, BOW-GWA-39RZ, and BOW-GWC-47. TDS in these samples has been qualified as estimated (“J”).

SDG 92652194

- All laboratory duplicate RPDs were within laboratory limits.

SDG 92657598

- All laboratory duplicate RPDs were within laboratory limits.

Field Precision

Five sets of field duplicate samples were collected for this sampling event (see Tables 3a – 3h for sample/duplicate identification and precision calculations). The calculated RPDs between sample and duplicate were within the QAPP acceptance criteria of 25% for all analytes detected above five times the RL. For results reported less than five times the RL, with a difference between sample and duplicate less than two times the RL are also considered acceptable (qualified “A*”). All field duplicate precision was considered acceptable with the following exceptions:

- TDS in the duplicate pair BOW-LF9-10-FD-08/ BOW-GWA-40 was detected at levels greater than five times the RL and an RPD greater than 25%. TDS in both samples has been qualified as estimated (“J”).
- TDS in the duplicate pair BOW-LF3-4-FD-07/ BOW-GWC-20R was detected at levels greater than five times the RL and an RPD greater than 25%. TDS in both samples has been qualified as estimated (“J”).

Summary

The groundwater analytical data are usable for the purpose of determining current concentrations of COCs in this medium at the affected property. A summary of qualified data is presented in Table 2 below.

J – Estimated data; the reported quantitation limit or sample concentration is approximated due to exceedance of one or more QC requirements.

J+ – The analyte was detected in an associated blank; estimated data with a high bias.

R – Rejected data due to one or more QC requirements.

UJ – The analyte was analyzed for but was detected at a level below the associated blank contamination. The associated value is an estimate and may be inaccurate or imprecise.

DATA USABILITY SUMMARY

Steven Elliott (Stantec) reviewed three data packages from Pace Analytical for the analysis of water samples collected from February 8 to April 11, 2023, at the Georgia Power Bowen Plant site. Samples were collected according to the Field Sampling Plan – Plant Bowen (Amec Foster Wheeler, 2016).

Intended Use of Data: To delineate concentrations of constituents of concern in site groundwater.

Analyses requested included:

- SW-846 6010D – Inductively coupled plasma – atomic emission spectrometry (ICP – AES) – Zinc, calcium, iron, manganese, potassium, sodium, and magnesium
- SW-846 6020B – Metals by inductively coupled plasma - mass spectrometry (ICP/MS) - Antimony
- SW-846 7470A – Mercury by manual cold-vapor
- EPA 300 Rev 2.1 – Chloride, fluoride, and sulfate by ion chromatography
- SM 2540C - 2015 – Total dissolved solids (TDS)
- SM 2320B – Total Alkalinity, Bicarbonate, Carbonate

Data were reviewed and validated as described in the field sampling plan and the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (November 2020). The results of the review/validation are discussed in this Data Usability Summary (DUS) and the associated Laboratory Data Review Checklists.

DATA REVIEW/VALIDATION RESULTS

Introduction

Thirty-three (33) groundwater samples, six (6) field blanks, and four (4) field duplicate samples were analyzed for one or more of the analyses listed above. Table 1 lists the field identifications cross-referenced to laboratory identifications. Table 2 is a summary of qualified data. Tables 3a through 3e summarize field duplicate results.

Analytical Results

The data packages contain a minimum of one quality control batch per analytical method analyzed. The quality control batch identifies the laboratory QC samples that correspond to the designated field samples. Not detected results are reported as less than the value of the method detection limit (MDL).

Preservation and Holding Times

The samples were evaluated for agreement with the chain-of-custody forms. The samples were received in the appropriate containers with the paperwork filled out properly. The laboratory sample condition upon receipt forms indicates all samples were received at temperatures ranging from 1.4°C to 4°C. All samples were analyzed within the technical holding time. No data were qualified.

Calibrations

Case narratives indicate Initial and continuing calibration verification data were within method acceptance criteria.

Blanks

Laboratory Method Blanks. No contamination was detected in any of the laboratory method blanks with the following exceptions:

SDG 92651771

- Chromium was detected in the method blank in batch 3939084 at a concentration of 0.0011 mg/L. No samples had reported values less than ten times the blank concentration; therefore, no qualifications were necessary.

SDG 92652194

- All method blank results were reported as not detected.

SDG 92652951

- All method blank results were reported as not detected.

SDG 92657598

- All method blank results were reported as not detected.

Field Blanks. Field blanks were analyzed for the full suite of sample analyses and all analytes were not detected with the following exceptions:

SDG 92651771

- All field blank results were reported as not detected.

SDG 92652194

- Mercury was detected in the field blank BOW-LF9-10-FB-13 (02/13/2023) at a concentration below the laboratory Reporting Limit (RL). Four samples (BOW-GWA-41, BOW-GWA-41R, BOW-GWA-41R, and BOW-GWA-41R) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- TDS was detected in the field blank BOW-LF9-10-FB-13 (02/13/2023) at a concentration above the laboratory Reporting Limit (RL). Seven samples (BOW-GWA-39Z, BOW-GWA-40, BOW-GWA-41, BOW-GWA-41R, BOW-GWA-41R, BOW-GWA-41R, and BOW-GWA-41R) had reported values less than 10 times the blank concentration and have been qualified as estimated.

SDG 92652951

- TDS was detected in the field blank BOW-LF1-2-FB-16 (02/16/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWA-2, BOW-GWA-2R, BOW-GWA-1, and BOW-LF1-2-FD-10) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Thallium was detected in the field blank BOW-LF1-2-FB-17 (02/17/2023) at a concentration above the laboratory Reporting Limit (RL). All associated samples were reported as not detected and since the bias is high, no qualification was necessary.
- TDS was detected in the field blank BOW-LF1-2-FB-17 (02/17/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWC-6RZ, BOW-GWA-3A, BOW-GWA-4RZ, and BOW-GWC-6) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Mercury was detected in the field blank BOW-LF1-2-FB-18 (02/20/2023) at a concentration above the laboratory Reporting Limit (RL). Four samples (BOW-GWC-10, BOW-GWC-11, BOW-GWC-10R, and BOW-GWC-11R) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Arsenic was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration below

the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-9 and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.

- Vanadium was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration above the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-9 and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Fluoride was detected in the field blank BOW-LF1-2-FB-19 (02/21/2023) at a concentration below the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-8RR and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.
- Potassium was detected in the field blank BOW-LF1-2-FB-20 (02/22/2023) at a concentration below the laboratory Reporting Limit (RL). For associated samples with results reported at concentrations greater than 10 times the blank concentration, no qualification was necessary. Two samples (BOW-GWC-8RR and BOW-GWC-12) had reported values less than 10 times the blank concentration and have been qualified as estimated.

SDG 92657598

- All field blank results were reported as not detected.

Laboratory Control Samples

Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) recoveries met the laboratory acceptance criteria for all analyses.

Matrix Spike/Matrix Spike Duplicates

Site-specific MS/MSD precision and accuracy results were within the laboratory acceptance criteria with the following exceptions:

SDG 92651771

- Alkalinity had a high MS percent recovery in the sample BOW-LF3-4-FB-11. However, because the bias was high and the parent sample result was non-detect, no qualification was necessary.

SDG 92652194

- All matrix spike recoveries were within laboratory limits.

SDG 92652951

- All matrix spike recoveries were within laboratory limits.

SDG 92657598

- All matrix spike recoveries were within laboratory limits.

Laboratory Duplicates

Appropriate analytical duplicates were analyzed and RPDs were within the laboratory acceptance criteria

with the following exceptions:

SDG 92651771

- All laboratory duplicate RPDs were within laboratory limits.

SDG 92652194

- TDS had high laboratory duplicate RPDs in samples BOW-LF9-10-FB-13, BOW-GWA-39RZ, and BOW-GWC-47. TDS in these samples has been qualified as estimated (“J”).

SDG 92652194

- All laboratory duplicate RPDs were within laboratory limits.

SDG 92657598

- All laboratory duplicate RPDs were within laboratory limits.

Field Precision

Five sets of field duplicate samples were collected for this sampling event (see Tables 3a – 3h for sample/duplicate identification and precision calculations). The calculated RPDs between sample and duplicate were within the QAPP acceptance criteria of 25% for all analytes detected above five times the RL. For results reported less than five times the RL, with a difference between sample and duplicate less than two times the RL are also considered acceptable (qualified “A*”). All field duplicate precision was considered acceptable with the following exceptions:

- TDS in the duplicate pair BOW-LF9-10-FD-08/ BOW-GWA-40 was detected at levels greater than five times the RL and an RPD greater than 25%. TDS in both samples has been qualified as estimated (“J”).
- TDS in the duplicate pair BOW-LF3-4-FD-07/ BOW-GWC-20R was detected at levels greater than five times the RL and an RPD greater than 25%. TDS in both samples has been qualified as estimated (“J”).

Summary

The groundwater analytical data are usable for the purpose of determining current concentrations of COCs in this medium at the affected property. A summary of qualified data is presented in Table 2 below.

J – Estimated data; the reported quantitation limit or sample concentration is approximated due to exceedance of one or more QC requirements.

J+ – The analyte was detected in an associated blank; estimated data with a high bias.

R – Rejected data due to one or more QC requirements.

UJ – The analyte was analyzed for but was detected at a level below the associated blank contamination. The associated value is an estimate and may be inaccurate or imprecise.

GWC-21R

Metals, Inorganics, Alkalinity, TDS

Created using VuSitu from In-Situ, Inc.

Low-Flow Test Report:

Test Date / Time: 2/9/2023 2:36:20 PM

Project: Plant Bowen LF Cells 3&4 February 2023

Operator Name: Kevin Stephenson

Location Name: GWC-25R Well Diameter: 2 in Casing Type: PVC Screen Length: 10 ft Top of Screen: 89.97 ft Total Depth: 99.97 ft Initial Depth to Water: 22.5 ft	Pump Type: QED Dedicated Tubing Type: LDPE Pump Intake From TOC: 94.97 ft Estimated Total Volume Pumped: 1920 ml Flow Cell Volume: 90 ml Final Flow Rate: 120 ml/min Final Draw Down: 0 ft	Instrument Used: Aqua TROLL 400 Serial Number: 789317
---	---	--

Test Notes:

Pre-purged 2 liters

Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Salinity	Flow

APPENDIX E STATISTICAL RESULTS

GROUNDWATER STATS CONSULTING

August 31, 2023

Southern Company Services
Attn: Mr. Joju Abraham
241 Ralph McGill Blvd. NE, Bin 10160
Atlanta, Georgia 30308-3374

Re: Plant Bowen Landfill Cells 1, 2, 9, and 10
Statistical Analysis – February 2023 Sample Event

Dear Mr. Abraham,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the statistical analysis of groundwater quality for the February 2023 sample event for Georgia Power Company's Plant Bowen Landfill Cells 1, 2, 9, and 10. The analysis complies with the United States Environmental Protection Agency (USEPA) Coal Combustion Residuals (CCR) Rule 40 Code of Federal Regulations (CFR) 257 Subpart D, the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10 and follows the USEPA Unified Guidance (2009).

Semi-annual sampling is conducted for USEPA's CCR Appendix III parameters, in addition to 16 parameters in accordance with the Georgia EPD's Solid Waste Permit. The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** GWA-1, GWA-2, GWA-2R, GWA-3A GWA-4RZ, GWA-39RZ, GWA-39Z, GWA-40, GWA-41, GWA-41R, GWA-42, GWA-43, GWA-43R, GWA-50R, and GWA-50
- **Downgradient wells:** GWC-5, GWC-6, GWC-6RZ, GWC-7Z, GWC-8RR, GWC-8Z, GWC-9, GWC-10, GWC-10R, GWC-11, GWC-11R, GWC-12, GWC-13, GWC-13RZ, GWC-14Z, GWC-15R, GWC-15Z, GWC-44, GWC-45, GWC-45R, GWC-46R, GWC-47, GWC-47R, GWC-48, GWC-49R, and GWC-49Z

Note that well GWA-3 was replaced with GWA-3A, which was first sampled in March 2021. As requested, data from well GWA-3 have been combined with data from replacement

well GWA-3A. No significant changes in statistical limits resulted from these revised measurements.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Kristina Rayner, Founder and Senior Statistician to Groundwater Stats Consulting. The analysis was prepared according to the recommended statistical methodology provided in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting and primary author of the USEPA Unified Guidance.

The following constituents are evaluated:

- **CCR Appendix III:** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Georgia EPD Appendix I:** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc

Note that the terms “parameters” and “constituents” are interchangeable throughout this report. When there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of well/constituent pairs with 100% non-detects follows this letter.

Time series plots for all well/constituent pairs are provided and are particularly useful for screening parameters detected in downgradient wells which require statistical analyses (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs.

Due to varying detection limits in background data sets, a substitution of the most recent reporting limit is used for all non-detects. Note that for calculation of intrawell prediction limits, substitution of the most recent reporting limit is performed separately for each well/parameter pair. In some cases, the reporting limit provided by the laboratory contains varying limits for a given parameter; therefore, the substitution may differ from well to well. This generally gives the most conservative limit in each case.

Reporting limit changes may occur depending on laboratory capabilities. In the case of beryllium and mercury, a change in laboratories resulted in a decrease in the respective reporting limits. The historic reporting limit of 0.003 mg/L for beryllium and 0.0005 mg/L

for mercury were substituted in place of the most recent reporting limits of 0.0005 mg/L for beryllium and 0.0002 mg/L for mercury, as requested by Stantec, to be consistent with previous statistical limits.

In earlier analyses, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves are provided to demonstrate that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. A few well/constituent pairs have a limited background data set with a minimum of 11 observations due either to sampling or truncation of background date ranges. As more samples are collected, these well/constituent pairs will meet the minimum power requirements. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. Power curves were based on the following statistical methods:

Georgia EPD Appendix I Constituents:

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan (antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, vanadium, and zinc)
- Interwell Prediction Limits with 1-of-2 resample plan (beryllium, mercury, and thallium)
- # Constituents: 16
- # Downgradient wells: 26

CCR Appendix III Constituents:

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan – (boron, calcium, fluoride, sulfate, TDS)
- Interwell Prediction Limits with 1-of-2 resample plan – (chloride and pH)
- # Constituents: 7
- # Downgradient wells: 26

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual

event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects.
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In the intrawell case, data for all wells and constituents may be re-evaluated when a minimum of 4 new data points are available to determine whether earlier concentrations are representative of present-day groundwater quality. In some cases, the earlier portion of data are deselected prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Two-Step Statistical Analysis

Intrawell statistical methods, combined with 1-of-2 resample plan, may be used as a conservative first step for identifying potential facility impacts in downgradient wells. Intrawell methods use background data for individual wells and may be overly sensitive to natural variation. In particular for nonparametric limits with small background sample sizes, the probability of a false positive is higher than the desired annual sitewide rate of

10%. Therefore, a large number of exceedances may occur as a result of natural variation rather than facility impacts. A second step can be used to further evaluate those exceedances and reduce the overall number of SSIs that result from natural variation. In instances where intrawell statistical methods identify an apparent SSI, a second step of interwell statistical evaluation may be used to determine whether the measurement exceeds the sitewide background limit based on pooled upgradient well data. This is similar in concept to the procedure used in compliance monitoring programs where an interwell statistical limit is used to determine "background" (USEPA Unified Guidance (2009), Chapter 7, Section 7.5). For the detection monitoring program, if the result does not exceed sitewide (interwell) background, an SSI is not declared.

When the result exceeds the sitewide (interwell) background, the 1-of-2 resample plan allows for collection of an independent resample to confirm or disconfirm the initial finding. A statistically significant increase is not declared unless the resample exceeds the intrawell prediction limit (United State Environmental Protection Agency (USEPA) Unified Guidance, March 2009, Chapter 19). When the resample confirms the initial exceedance, further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). When any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. In cases where intrawell and interwell exceedances are noted and no resamples are collected, the initial exceedance will be considered a confirmed statistically significant increase (SSI).

Trend tests, in addition to interwell prediction limits, are recommended for well/constituent pairs found to have an apparent intrawell SSI. Trend analysis will provide for detection of long-term changes and potential facility impacts at a given well in cases where the concentrations at that well remain below the sitewide upgradient limits. Thus, the two-step approach has additional capability to detect long-term changes at downgradient wells compared to interwell methods alone. While a trend may be identified by visual inspection, a quantification of the trend and its significance is needed to identify whether concentrations are statistically significantly increasing, decreasing, or remaining stable over time. The absence of a statistically significant increasing trend indicates that an initial intrawell exceedance is short-term and may be the result of natural variation rather than facility impact to groundwater. If a facility impact has occurred, it will likely result in additional exceedances in future sampling events. When a statistically significant increasing trend is noted, additional data may be needed to demonstrate that there is reasonable evidence that the initial intrawell statistical exceedance is a result of natural variation rather than a result of impact to groundwater quality downgradient of the facility.

Appendix I & Appendix III Background Screening & Update – Conducted in April 2022

Outlier Analysis

Prior to updating background data, Tukey's outlier test and visual screening were used to evaluate data at all wells through February 2022. Tukey's test identified several potential outliers and confirmed previously flagged values. Some identified values were not flagged because they appeared to be representative of natural variation. High values that were not identified by Tukey's test but flagged as outliers reduced variation among background datasets and resulted in statistical limits that are conservative (in most cases, lower) from a regulatory perspective. Note that previously flagged values for antimony at upgradient wells GWA-1 and GWA-2 along with downgradient well GWC-11R were unflagged during the background update as more recent values were of similar concentration. As mentioned above, any flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. Summary tables of all flagged values follow this report (Figure C).

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells for constituents detected in downgradient wells. The ANOVA assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter. The ANOVA identified variation for all Appendix I & III parameters except for mercury and thallium; therefore, mercury and thallium will be tested with interwell statistical methods.

All parameters were further evaluated as described for the appropriateness of intrawell testing to accommodate the groundwater quality. A summary table of the ANOVA results is included with the reports.

Eligibility of Intrawell Methods

Intrawell limits constructed from carefully screened background data from within each well serve to provide statistical limits that are conservative (i.e., lower) from a regulatory perspective, and that will rapidly identify a change in more recent compliance data from within a given well. This statistical method removes the element of variation from across wells and eliminates the chance of mistaking natural spatial variation for a release from the facility. Prior to performing intrawell prediction limits, several steps are required to reasonably demonstrate downgradient water quality does not have existing impacts from the practices of the facility.

Exploratory data analysis was used as a general comparison of concentrations in downgradient wells for all Appendix I and III parameters recommended for intrawell analyses to concentrations reported in upgradient wells. Upper tolerance limits are used in conjunction with confidence intervals to determine whether the estimated averages in downgradient wells are higher than observed levels upgradient of the facility. Upper tolerance limits estimate an upper percentile (in this case the 99th percentile) with known confidence level and thus represent the upper range of likely background values. Tolerance limits are similar to prediction limits that are used for detection monitoring, but tolerance limits are constructed to contain a given fraction of the background population whereas prediction limits are constructed to contain a given number of future observations with known confidence level.

In cases where downgradient average concentrations are higher than observed concentrations upgradient for a given constituent, an independent study and hydrogeological investigation would be required to identify local geochemical conditions and expected groundwater quality for the region to justify an intrawell approach. Such an assessment is beyond the scope of services provided by Groundwater Stats Consulting. When there is not an obvious explanation for observed concentration differences in downgradient wells relative to reported concentrations in upgradient wells, interwell prediction limits will initially be selected for the statistical method until further evidence shows that concentrations are due to natural variation rather than a result of the facility.

Upper Tolerance Limits

Parametric tolerance limits were constructed with a target of 99% confidence and 95% coverage using pooled upgradient well data for each of the Appendix III parameters. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples. As more data are collected, the background population is better represented and the confidence and coverage levels for nonparametric tolerance limits increase.

Confidence Intervals

Confidence intervals were constructed on downgradient wells for each of the Appendix I & III parameters, using the tolerance limits discussed above, to determine intrawell eligibility. When the entire confidence interval is above a background standard for a given parameter, interwell methods are initially recommended as the statistical method. Therefore, only parameters with confidence intervals which did not exceed background standards are eligible for intrawell prediction limits. Note that well/constituent pairs with 100% non-detects were deselected prior to construction of confidence intervals, and a list of these well/constituent pairs follows this report.

Confidence intervals for Appendix I & III parameters exceeded their respective background limits for beryllium, chloride, and pH. Therefore, for Appendix I parameters, interwell methods are recommended for: beryllium, mercury, and thallium. Intrawell methods are recommended for antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, vanadium, and zinc. For Appendix III parameters, interwell methods are recommended for chloride and pH. Intrawell methods are recommended for boron, calcium, fluoride, sulfate, and TDS.

Mann-Whitney - Intrawell

For constituents requiring intrawell prediction limits, the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the medians of historical data through September 2018 for Appendix I constituents and through September 2019 for Appendix III constituents to the medians of the new compliance samples at each well through August 2021. Previously truncated data sets discussed above were also compared to the most recent set of measurements through August 2021. If the medians of the two groups are not significantly different at the 99% confidence level, background data are typically updated to include the newer compliance data. Note that no reports were produced for several well/constituent pairs as there was no variation in the data. Additionally, no Mann-Whitney test was run for barium at downgradient well GWC-13RZ since this

well/constituent pair has been historically evaluated with a trend test in lieu of prediction limits due to due to steadily increasing data since early 2016.

Several statistically significant differences were found between the two groups for the Appendix I and III constituents. Typically, when the test concludes that the medians of the two groups are significantly different, particularly in the downgradient wells, the background data are not updated to include the newer data unless updating results in the same or more conservative limits, or it can be reasonably justified that the change in concentrations reflects a naturally occurring shift unrelated to practices at the site. In studies in which at least one of the segments being compared is of short duration, the comparison is complicated by the fact that normal short-term variation may be mistaken for long-term change in medians.

Statistically significant increasing medians were found for the following well/constituent pairs:

Appendix I:

- Barium: GWA-2R, GWA-4RZ (both upgradient), GWC-11R, and GWC-49R
- Cobalt: GWA-4RZ (upgradient)
- Zinc: GWC-47 and GWC-47R

Appendix III:

- Sulfate: GWC-14Z

These well/constituent pairs each had their respective records updated with compliance data and are discussed below.

For upgradient well/constituent pairs with significant increases in medians (barium in GWA-2R and GWA-4RZ and cobalt in GWA-4RZ), the increases in concentrations are, reportedly, not related to the facility and, therefore, represent background conditions. For barium in downgradient well GWC-11R and sulfate in downgradient well GWC-14Z, the concentrations are relatively low, and updating does not result in a high limit compared to upgradient wells. For barium in downgradient well GWC-49R, the compliance samples remain within range of concentrations upgradient of the facility and the pattern is very similar to that of upgradient well GWA-4RZ which has higher reported concentrations; therefore, this well/constituent pair was updated. Regarding zinc in downgradient wells GWC-47 and GWC-47R, the most recent concentrations in these wells are, reportedly, due to variation in groundwater quality, are somewhat similar to historical concentrations detected in these wells, are marginally higher than the current reporting limit, and remain

within the range of upgradient concentrations; therefore, these well/constituent pairs were updated.

A large number of well/constituent pairs for Appendix I and Appendix III constituents had statistically significant decreasing medians in more recent data. The significant cases are listed in the summary tables for Appendix I and Appendix III Mann-Whitney results. In most cases with significant results, the differences were relatively small, the most recent measurements were similar to measurements in the early part of the record, or the update resulted in the same or more conservative limits. Therefore, the majority of these records were updated. Except for pH, which has both an upper and lower prediction limit, decreasing differences will generally result in more conservative limits. For parametric limits, however, a decreasing difference can result in higher variance, which tends to increase the limit. For the following cases, earlier portions of the records were truncated to reduce variability among background data, utilize concentrations that appear to have stabilized, and remove elevated historical concentrations:

Appendix I:

- Vanadium: GWC-15Z
- Zinc: GWC-5

Appendix III:

- Calcium: GWC-49Z
- Sulfate: GWC-49Z

Any adjustments are shown in the Date Range Table in addition to adjustments listed for chromium, copper, and nickel from previous analysis.

Upgradient Well Trend Tests – Interwell

The Sen's Slope/Mann Kendall trend test was used to evaluate data at upgradient wells for each of the parameters tested using interwell prediction limits--beryllium, mercury, and thallium (Appendix I), and chloride and pH (Appendix III) to identify statistically significant increasing or decreasing trends in background. The results of the trend analyses showed no statistically significant increasing or decreasing trends for Appendix I constituents. For the Appendix III constituents, no statistically significant increasing trends were identified. The following statistically significant decreasing trends were noted:

- Chloride: GWA-1, GWA-39Z, GWA-41, and GWA-41R
- pH: GWA-2R, GWA-41R, GWA-43, GWA-50, and GWA-50R

Truncation of upgradient well records to remove decreasing trends should be done with caution since the higher concentrations could appear in future years at downgradient wells in the absence of facility impacts. Therefore, no adjustments were made at this time. While no statistically significant trend was identified for pH in upgradient well GWA-3A, it was noted that the more recent reported measurements are higher than those reported historically. Concentrations of pH in this well will continue to be monitored and further studies may be required to determine the cause of the increasing concentrations.

Evaluation of Georgia EPD Appendix I Constituents – February 2023

Intrawell Prediction Limits

Intrawell prediction limits, combined with a 1-of-2 resample plan, for antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, vanadium, and zinc were constructed using all available data through August 2021, except for the cases mentioned above and listed in the Date Range Table. Compliance data from the February 2023 sample event were compared to these limits (Figure D). No statistical analyses were included for well/constituent pairs with 100% non-detects and a list of those well/constituent pairs follows this letter.

As discussed earlier, the most recent reporting limit is substituted on a well-by-well basis for computing intrawell prediction limits. Therefore, individual wells can have different substitutions for a given parameter depending on what the laboratory has reported for each well. Note that the intrawell prediction limit changed for chromium at GWC-8Z and cobalt at GWC-7Z as a result of the most recent reporting limit replacing historic non-detects. No statistical exceedances resulted from the lower statistical limits for these well/constituent pairs.

For some well/constituent pairs containing <15% non-detects such as chromium at GWC-46R, nickel at GWA-3A, and zinc at wells GWA-3A and GWC-12, parametric prediction limits slightly changed compared to those established during the background update. An update was made to the Sanitas™ statistical software in October 2022 that determines the percentage of non-detects within a given background record rather than all records evaluated for a given constituent. Simple substitution of ½ the reporting limit is applied when the percentage of non-detects is <15% in accordance with the USEPA EPA Unified Guidance (2009). No significant changes resulted from this implementation.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant

increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. Summaries of the Georgia EPD Appendix I prediction limits follow this report. Exceedances were identified for the following well/constituent pairs:

- Antimony: GWA-1 (upgradient), GWA-41R (upgradient), and GWC-49R
- Chromium: GWC-45R
- Copper: GWC-44
- Nickel: GWC-48

Two-Step Approach

When interwell prediction limits were constructed for the apparent intrawell prediction limit exceedances in downgradient wells, no exceedances were identified (Figure E). Values that exceed intrawell background limits are further evaluated using trend tests as discussed below.

Interwell Prediction Limits

For beryllium, mercury, and thallium interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February 2023. Results and a summary table follow this report (Figure F). Regarding beryllium and mercury, prediction limits were set at the reporting limits of 0.003 mg/L and 0.0005 mg/L.

Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The February 2023 sample from each downgradient well was compared to the background limit to determine whether exceedances over background are present. An exceedance was identified for the following well/constituent pair:

- Mercury: GWC-48

Trend Tests

When an exceedance occurs in a downgradient well, the exceedance is further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level--whether or not the exceedance is confirmed as an SSI--in addition to interwell prediction limits in accordance with the two-step analysis. Upgradient wells are included in the trend analyses

to identify whether similar patterns exist upgradient of the site. As mentioned above, a trend test was included to evaluate concentrations for barium in well GWC-13RZ in lieu of prediction limits. That trend test, along with trend tests for upgradient wells, follows this report (Figure G). Statistically significant trends were identified for the following well/constituent pairs:

Increasing

- Barium: GWA-4RZ (upgradient) and GWC-13RZ

Decreasing

- Barium: GWA-1, GWA-43, GWA-43R, GWA-50, and GWA-50R (all upgradient)
- Copper: GWA-3A, GWA-50, and GWA-50R (all upgradient)
- Nickel: GWA-3A, GWA-50, and GWA-50R (all upgradient)

Note that for barium in downgradient well GWC-13RZ, although the trend test shows an overall increasing trend over the study period, there is a noted increase during 2016-17. Current concentrations appear to be stable since early 2018.

Evaluation of CCR Appendix III Parameters – February 2023

Intrawell Prediction Limits

For boron, calcium, fluoride, sulfate, and TDS, intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical data through August 2021. Results and a summary table follow this report. The February 2023 sample from each downgradient well was compared its respective background limit to determine whether exceedances over background are present (Figure H). Note that the reporting limit for TDS at wells GWA-50R increased from 10 mg/L to 25 mg/L and resulted in slightly lower prediction limits than those established during the background update. No significant changes occurred as a result of the reporting limit increase.

As mentioned above, for some well/constituent pairs containing <15% non-detects such as TDS at GWC-9, parametric prediction limits slightly changed compared to those established during the background update. An update was made to the Sanitas™ statistical software in October 2022 that determines the percentage of non-detects within a given background record rather than all records evaluated for a given constituent. Simple substitution of ½ the reporting limit is applied when the percentage of non-detects is <15% in accordance with the USEPA EPA Unified Guidance (2009). No significant changes resulted from this implementation.

Exceedances were identified for the following well/constituent pairs:

- Calcium: GWA-3A (upgradient) and GWC-45R
- Sulfate: GWA-2R (upgradient) and GWC-45R
- TDS: GWA-42 (upgradient) and GWC-13

Two-Step Approach

When interwell prediction limits were constructed (Figure I) for the apparent intrawell prediction limit exceedances in downgradient wells, the following exceedance was noted:

- TDS: GWC-13

Note that the concentrations for many downgradient wells at this site are small in absolute terms and are much smaller than those reported in the upgradient wells. Thus, very large increases at those wells would be required to exceed the interwell limits. In cases such as this, additional studies would be required to fully understand the groundwater quality. In addition to the two-step method, observations that exceeded intrawell background limits are further evaluated using trend tests as discussed below. If upward trends are found and persist, a separate geochemical and hydrologic investigation of the exceedances may be required to determine whether facility impacts have occurred.

Interwell Prediction Limits

For chloride and pH, interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February 2023. Results and a summary table follow this report. Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent.

During this analysis, a previously flagged value for pH in upgradient well GWA-41R was unflagged as a similar value was observed upgradient of the facility for the February 2023 sample event in upgradient well GWA-3A. Note that high values early in the record for pH at downgradient wells GWC-13RZ and GWC-14Z were flagged; however, flagging these values did not impact statistical limits because the observations were among downgradient wells.

Nonparametric prediction limits were constructed as the background data for chloride and pH did not follow a normal or transformed-normal distributed when tested using the Chi-Squared normality test. The February 2023 sample from each downgradient well was compared to the background limit to determine whether exceedances over background

are present (Figure J). Exceedances were identified for the following downgradient well/constituent pairs:

- pH (lower limit): GWC-9, GWC-44, and GWC-45

Trend Tests

Data from downgradient well/constituent pairs found to exceed their respective prediction limits were further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level along with upgradient wells for the same constituents. A summary of the trend test results follows this letter (Figure K). Statistically significant trends were identified for the following well/constituent pairs:

Increasing

- Calcium: GWA-1, GWA-2R, GWA-42, GWA-4RZ (all upgradient), and GWC-45R
- Sulfate: GWC-45R

Decreasing

- Calcium: GWA-43 and GWA-50R (both upgradient)
- pH: GWA-1, GWA-2R, GWA-40, GWA-41R, GWA-43, GWA-50, GWA-50R (all upgradient), GWC-9, GWC-44, and GWC-45
- Sulfate: GWA-1, GWA-39Z, GWA-43R, and GWA-50R (all upgradient)
- TDS: GWA-43 (upgradient)

Chloride Intrawell Prediction Limits

While interwell prediction limits were initially recommended in 2015 to evaluate chloride, more recent evidence provided by Stantec Consultants suggests that intrawell prediction limits are appropriate for this constituent due to variation in groundwater quality unrelated to practices at the landfill. Additionally, more recent reported concentrations at downgradient well GWC-48 are similar to those reported historically at upgradient well GWA-43R, and concentrations at all wells are less than the established Maximum Contaminant Limit of 250 mg/L. When an intrawell prediction limit was constructed to evaluate chloride at well GWC-48 (Figure L), the following exceedance was identified:

- Chloride: GWC-48

Since more recent concentrations of chloride at this well appear to represent natural variation in groundwater quality, as more data are collected, the background data set

used to establish the intrawell prediction limit will be re-evaluated for updating the limit to use more recent and stable measurements during the next background update.

Resample Reports – March & April 2023

Resamples were collected in March 2023 for the initial prediction limit exceedances of chloride and mercury in well GWC-48, as well as a resample collected in April 2023 for the initial prediction exceedance of TDS in well GWC-13. Note that pH was also sampled for these wells. Time series and box plots were constructed for well/constituent pairs that were resampled, along with data from all upgradient wells for the same constituents (Figures M and N, respectively). When an intrawell prediction limit was constructed through August 2021 to evaluate the resample for TDS at well GWC-13 (Figure O), no exceedance was identified; therefore, no further action is necessary.

When interwell prediction limits were constructed using pooled upgradient well data through February 2023 to evaluate the resamples for chloride and pH, as well as mercury (Figures P and Q), an exceedance was identified for the following well/constituent pair:

- pH (lower limit): GWC-48

Chloride Intrawell Prediction Limits - Resample

Based on the intrawell prediction limit for chloride at well GWC-48 as discussed above, an intrawell prediction limit was constructed to evaluate the March 2023 resample (Figure R), and the following exceedance was identified:

- Chloride: GWC-48

Summary

Georgia EPD Appendix I

Based on the results of the Appendix I prediction limits, the two-step approach, and resample reports, no exceedances were identified.

CCR Appendix III

Based on the results of the Appendix III constituents requiring either intrawell or interwell prediction limits, after testing the apparent intrawell exceedances among downgradient

wells using the two-step approach, and the resample reports, the following exceedances were identified:

Appendix III Intrawell

- None

Appendix III Interwell

- pH (lower limit): GWC-9, GWC-44, GWC-45, and GWC-48

Trend tests were performed for all exceedances and corresponding upgradient wells. Results were presented in the corresponding tables.

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Bowen Landfill Cells 1, 2, 9 and 10. If you have any questions or comments, please feel free to contact us.

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chloride, Total Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chloride, Total Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chloride, Total Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chloride, Total Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chloride, Total Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chromium Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chromium Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chromium Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chromium Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chromium Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Chromium Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Cobalt Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Cobalt Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Cobalt Analysis Run 3/31/2023 12:02 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Cobalt Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Cobalt Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Cobalt Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Copper Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Copper Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Copper Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Copper Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Copper Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Copper Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Fluoride, total Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Fluoride, total Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Fluoride, total Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Fluoride, total Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Fluoride, total Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Fluoride, total Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Lead Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Lead Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Lead Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Lead Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Lead Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Lead Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Mercury Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Mercury Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Mercury Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Mercury Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Mercury Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Mercury Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Nickel Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Nickel Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Nickel Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Nickel Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Nickel Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Nickel Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: pH Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: pH Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: pH Analysis Run 3/31/2023 12:03 PM
 Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: pH Analysis Run 3/31/2023 12:03 PM
 Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: pH Analysis Run 3/31/2023 12:03 PM
 Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: pH Analysis Run 3/31/2023 12:03 PM
 Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Selenium Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Selenium Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Selenium Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Selenium Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Selenium Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Selenium Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Silver Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Silver Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Silver Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Silver Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Silver Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Silver Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Sulfate, total Analysis Run 3/31/2023 12:03 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Sulfate, total Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Sulfate, total Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Sulfate, total Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Sulfate, total Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Sulfate, total Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Thallium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Thallium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Thallium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Thallium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Thallium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Thallium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Total Dissolved Solids [TDS] Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Total Dissolved Solids [TDS] Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Total Dissolved Solids [TDS] Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Total Dissolved Solids [TDS] Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Total Dissolved Solids [TDS] Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Total Dissolved Solids [TDS] Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Vanadium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Vanadium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Vanadium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Vanadium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Vanadium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Vanadium Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Zinc Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Zinc Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Zinc Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Zinc Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Zinc Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Zinc Analysis Run 3/31/2023 12:04 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Time Series

Constituent: Antimony (mg/L) Analysis Run 3/31/2023 12:13 PM
 Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10
